ANNEX I LEGISLATION LIST 36

MANAGEMENT MESSAGE

With great pleasure I present the Environmental Statement 2013 of MOTOR OIL, which we publish according to the most recent European Directive 1221/2009 for EMAS (Eco Management and Audit Scheme). This is the eighth consecutive Environmental Statement voluntarily published by our company, which is registered since 2007 in the Greek Ledger of EMAS organizations with registration number EL 000067, in line with our commitment for properly and rationally managing environmental issues, and in the context of the Integrated Management System that we apply for this purpose.

MOTOR OIL operates in a way that fully respects the Environment, and takes care for the best management of natural resources, as well as for reducing the environmental impacts that result from its operations, having as a guide its Environmental Policy, and taking into account the interests of all stakeholders.

In a difficult financial year for the refining industry, as 2013 was, for Europe and the Mediterranean in particular, we continue to operate with far-sightedness and responsibility, having sustainable growth fully integrated in both our daily activities and in our plans for the future. In such an adverse economic setting, MOTOR OIL continues to prove its environmental care, and having implemented a significant number of investments in order to minimize the impact of its operation on the environment, reduces energy consumption per ton of raw materials (from 3.56 TJ / thousand MT in 2006 to 2.46 in 2013), as well as energy losses (from 5.3 % of raw materials in 2006 to 2.76 % in 2013).

Thus, the improvement of the company's environmental performance was confirmed for year 2013 too, as higher production targets were achieved at lower energy consumption, lower resource consumption and reduced emissions.

In the present Environmental Statement you will find data pertaining to the various Refinery units and process activities, our Environmental Management Policy, the assessment of our 2013 Environmental performance, as well as the new objectives to which we commit ourselves.

Also in 2013, the CE Marking certification of Bitumen and bituminous binders was achieved, in accordance with the European Construction Products Directive 305/2011/EEC and the requirements of European Standard EN 12591:2009, valid until the year 2017.

The investment policy of the company is focused on the production of environmentally friendly products, by implementing innovative and environmentally friendly technologies, while investing in new projects and in the automation of production processes for improving the productivity and energy efficiency of the Refinery. By implementing the above investment policy, we believe that we actively contribute to environmental sustainability, and to the economic development of the local society in which we base our industrial operations, as well as of our country in general.

The overall responsibility for the Environment, as well as the Health and Safety of our personnel is mine. The duties that I have assigned to my collaborators and employees in the context of Health, Safety and Environmental Management are specific and, as I believe, effective.

All MOTOR OIL personnel participate in the implementation of the Environmental Management System, through relevant training, the set-up of workgroups, the realization of the program of internal audits, and the carrying out of emergency preparedness exercises.

I hope that you will find this Statement not only informative but also interesting.

It is my obligation at this point to emphasize that MOTOR OIL's Environmental Statement is an opportunity to communicate with our associates and all stakeholders on the performance of MOTOR OIL in managing environmental issues, and in this context, my colleagues and I are at your disposal for any query or comment you might have.

M. J. Stiakakis

Manufacturing General Manager

01 COMPANY PRESENTATION

1.1 General Information

MOTOR OIL is a leading Company in the oil refining industry supplying its customers with a wide range of high quality products. The Company has evolved to one of the main pillars of the national economy, while, at the same time, it maintains and expands its key role in the wider area of South Eastern Europe.

MOTOR OIL started operating in 1972 as a company engaged in refining and trading of oil products and has been responsibly functioning ever since, aiming at sustainable profitability and socially responsible growth. The Company's Vision and Mission define the context which drives the planning and implementation of its dynamic growth. In addition, company operation is based on a set of strict Principles and Values, which comprise the constituent elements of its business practices.

MOTOR OIL's Vision and Mission are based on three basic principles:

- Respect for our People
- Respect for the Environment
- Transparency

Materializing the Corporate Vision and Mission is based on four corporate values:

- Effectiveness
- Accountability
- Social Responsibility
- Integrity

The Company Refinery is located at Agioi Theodoroi, Corinth, approximately 70 km from the center of Athens and the area of the premises of the facility is 1,548.1 acres (biodiversity index). Along with its auxiliary premises and its fuel distribution premises, the Refinery constitutes the largest private industrial complex in Greece, and is considered as one of the most flexible refineries across Europe.

It can process different types of crude oil, producing a wide spectrum of oil products that meet the strictest international standards, thus serving the supply requirements of Oil Companies both in Greece and abroad.

At the same time it is the only Refinery in Greece that has a lubricants production complex. Apart from the basic units, (atmospheric distillation, catalytic reforming and hydrotreating) the refinery includes conversion units as well (thermal, catalytic cracking, and hydrocracking).

The industrial plant of the Company has an operating license which has been granted by Y.P.A.N (Hellenic Republic Ministry of Development / Department of Energy / Department of Oil Installations / section A:Δ.3/α./6841 – 16.08.2007, while the new Atmospheric Distillation unit U-7100 the operating license is granted by YPEKA – Ministry of Environment, Energy & Climate Change/Department of energy and climate change / Department of Oil Installations / section A: Δ.3/A./14094, date 12-11-2010) and they fulfill the legal requirements, which demand the application of Best Available Techniques, measures for the protection of the ground, water and air, threshold limits for waste emission, emergency response measures (leakages, malfunctions,

interruptions), waste management measures as established in the permits from Y.P.E.K.A (Approval of the Environmental Operating Terms – Y.P.E.K.A/Department of Air Pollution and Noise Control / Section of Industries : 145996/date 22.06.2009 and 188358/date 10.10.2011 and 183581/date 17.10.2013), which are in a total conformity with the European legislation (directive IPPC (96/61/EK as amended by Directive 2008/1/EC and replaced by Directive 2010/75/EC) and 2001/80/EK.).

Also, the Refinery has a license for Greenhouse Gases Emissions with number YPEKA/Department of Environment/Department of Air Pollution and Noise Control /GEDE 214048 – 31/12/2012.

The following table summarizes the company data.

Statistical Codification of Economic Activity:	232
NACE Code	DF.19.20 - Manufacture of refined petroleum products
Premises :	Agioi Theodoroi, Corinth
Installed Power :	Main electric motors power 78.17 MW Back up electric motors power 48.88 MW
Postal Address :	71st km of Old National Road Athens – Corinth, position «Soussaki»

Vardinoyannis Group is the major shareholder of MOTOR OIL. In 2001, the Company made an Initial Public Offering, listing its shares in the Athens Stock Exchange, substantially increasing its share capital.

The Company's shareholder structure at 31.12.2013 is presented in the following table.

SHAREHOLDERS	%
Petroventure Holdings Limited	40.00
Doson Investments Company	8.46
Free Float	51.54
Total	100.00

1.2 Timeline of Company's Growth

MOTOR OIL was founded in 1972, accomplishing afterwards step-changes towards the improvement, expansion and upgrading of its refinery. These steps are concisely presented in the following chronological table.

Foundation and beginning of operation of the refinery comprised of a crude oil refining unit, a base lubricants production unit and port facilities.	1972	
		1975 Construction of an Atmospheric Distillation Unit, with a capacity of 100,000 barrels/ day and tanks with a capacity of 1.5 million m ³ .
Construction of a Catalytic Reforming Unit (further processing of naphtha for gasoline production).	1978	
		1980 Installation of a Fuel Catalytic Cracking Unit (processing of fuel oil into high added value products).
Construction of a Power Plant that uses fuel gas as raw material. License to sell electric power to the national grid.	1984	
		1993 Quality Management System certification according to ISO 9002 standard, concerning all the activities of the Company
Purchase of 50% of the Company's shares by Aramco Overseas Company BV, 100% subsidiary of Saudi Arabian Oil Company (Saudi Aramco). Relocation of Company Headquarters to a modern building in Marousi, Attica.	1996	
		2000 Manufacture of products according to European Union standards for the year 2000, by constructing new units and converting the naphtha reformer to a continuous 103 octane reformation unit (CCR). New Central Control Room and installation of a Distributed Control System (DCS). Environmental Management System certification according to ISO 14001:1996 standard.
Share capital increases through public offer of shares and listing on the Athens Stock Exchange. Installation of the new gas turbine at the Power Plant. Upgrade of lubricants' vacuum unit.	2001	
		2002 100% acquisition of AVIN OIL, a domestic retail marketing oil company
Development of a Quality Management System according to ISO 9001:2000 standard, which was certified on January 2003	2003	
		2004 Re-certification of the Environmental Management System according to ISO 14001:2004 for three more years. Beginning of operation of the Truck Loading Terminal at the Refinery.
Beginning of operation of a Hydrocracker unit that enables the production of clean fuels according to 2005 and 2009 European Union specifications. Acquisition of the stake of Aramco Overseas Company B.V. in the Company by Motor Oil Holdings S.A.	2005	
		2006 Re-certification according to ISO 9001:2000 for three more years (until 2009). Accreditation of the Refinery Laboratory according to ISO 17025:2005.
Re-certification of the company Environmental Management System according to ISO 14001:2004, valid until 2010. Company Registration in the Greek Ledger of EMAS (Eco Management Audit Scheme).	2007	
		2008 Certification of the Occupational Health and Safety Management System according to OHSAS 18001:2007. Safe implementation of the largest in company history refinery shut down program for periodic maintenance work. Start of construction of the New Crude Distillation Unit. The non-governmental organization "Ecocity" awards our company, for the second consecutive year, the "OIKOPOLIS 2008 - Environmental Investment" prize
Re-certification of the Integrated Management System according to the new ISO 9001:2008 standard, valid until 2012. At the same time some significant strategic initiatives were taken: Agreement with Shell International Petroleum Company for acquiring its downstream operations in Greece (except for Lubricants), start of the construction of the KORINTHOS POWER S.A. natural gas power plant, acquisition by MOTOR OIL Group of an additional 64.06% stake in OFC Aviation Fuel Services SA, with which the total Group share reached 92.06%.	2009	
		2010 Beginning of operation of the new 60,000 barrels per day atmospheric distillation complex. Beginning of the installation of a fifth gas turbine at the Power Plant (17 MW natural gas unit). Re-accreditation of the Refinery Chemical Laboratory according to ISO 17025:2005, with validity until 2014. Re-certification of the Environmental Management System according to ISO 14001:2004 with validity until 2013. Successful completion of the acquisition of Shell downstream operations in Greece.
Re-certification of the Occupational Health and Safety Management System according to OHSAS 18001:2007, valid until 2014. Certification CE marking of Bitumen and bituminous binders in accordance with European Directive 89/106/EEC Construction Products, as amended by 93/68/EEC and in accordance with the requirements of the European Standard EN 12591:2009. Completion of the construction of the fifth Gas Turbine unit (GT#5). With the addition of this Gas Turbine unit, the installed power of the Refinery Cogeneration Power Plant amounts to 85MW and ensures for the Refinery full energy self-sufficiency, due to the addition of CDU.	2011	
		2012 Re-certification of the Integrated Management System according to ISO 9001:2008 standard, valid until 2015. Extending the scope of accreditation of the Refinery Chemical Laboratory according to ISO / IEC 17025:2005.
CE Marking certification of Bitumen and bituminous binders, in accordance with the European Construction Products Directive 305/2011/EEC and the requirements of European Standard EN 12591:2009, valid until the year 2017.	2013	

01 COMPANY PRESENTATION

CERTIFICATE OF CONFORMITY OF FACTORY PRODUCTION CONTROL

This certificate is issued to:
Manufacturer: Motor Oil (Hellas) Corinth Refineries SA
 Agioi Theodoroi, Corinth, Greece

In compliance with Regulation 305/2011/EU of the European Parliament and of the Council of 9 March 2011 (the Construction Products Regulation or CPR), this certificate applies to the construction product:

Bituminous mixtures

This certificate attests that all provisions concerning the assessment and verification of constancy of performance and the performances described in Annex ZA of the standard(s)

EN 12591:2009 – Bitumen and bituminous binders – Specifications for paving grade bitumens

under system 2+ are applied and that the products fulfil all the prescribed requirements set out above.

The attached Schedule, of the same date, details the manufacturing location(s), harmonised product standard and product parameters and shall form a part of this certificate.

This Certificate will remain valid as long as the test methods and/or factory production control requirements included in the harmonised standard, used to assess the performance of the described characteristics, do not change, and the product, and the manufacturing conditions in the plant are not modified significantly.

Certificate No: C038/CPR/PIR1107426/A
 Original Approval: 16 February 2011
 Current Certificate: 13 February 2014
 Expiry Date: 15 February 2017

1.3 Corporate Social Responsibility (CSR)

MOTOR OIL fully embraces the importance of the effort for sustainable growth via the application of the principles and objectives of Corporate Social Responsibility. It expresses its social responsibility with the commitment that its activities are based on respect for people, the environment and society. A natural outcome of this commitment is a holistic approach to the application of the principles of Corporate Social Responsibility, taking into consideration the protection of the environment, as well as the stakeholders - its personnel, the shareholders, the customers, the suppliers and society as a whole.

MOTOR OIL attributes maximum emphasis on the implementation of integrated management systems in Occupational Health and Safety and Environment, and has spent 19.3 million € for Health & Safety and 22.7 million € for the Environment, in investments and operating expenditures. Aiming to zero accidents, we are trying, on a daily basis, to cultivate culture of safety in all our activities and facilities.

MOTOR OIL is a founding member of the Hellenic Network for Corporate Social Responsibility, and has subscribed and participates in the initiative of the United Nations Organization for the UN Global Compact, the aim of which is to direct the enterprises to sustainable growth through voluntary and responsible behavior and actions.

CSR indicates the balanced approach to the financial, social and environmental impact of company operations according to the three dimensions "society - environment - economy" that are globally accepted by the responsible members of the business community. These outline the main objectives of an organization to create value for its shareholders, while at the same time caring for the satisfaction of its customers, its personnel, the

environment and society in general.

Relevant to this is also the concept of sustainable growth, meaning the growth that aims at covering today's needs without jeopardizing the availability of resources for future generations.

Consequently, MOTOR OIL is committed / pledges to fully conform with the ten principles of the UN Global Compact, regarding:

- Human rights,
- Labor
- The environment and
- Transparency (anti-corruption)

Amongst the challenges that MOTOR OIL faces, the most important ones are related with managing Health, Safety and the Protection of Environment. The frame for the management of these challenges and the achievement of continuous improvement in these particular sectors, according to the principles of Corporate Social Responsibility and the UN Global Compact, is defined by the policy for Health, Safety and the Environment.

CORPORATE RESPONSIBILITY MANAGEMENT MODEL

HUMAN RESOURCES

- Health and safety
- Employment rights and equal opportunities
- Education and training
- Discretionary benefits

SHAREHOLDERS, CUSTOMERS, SUPPLIERS

- Corporate governance
- Quality and reliability
- Service
- Control and assessment
- Risk management

ENVIRONMENT

- Clean fuels
- Reduced emissions
- Rational energy management
- Technical optimization

THE PUBLIC

- Contribution to culture, sports and the environment
- Support for socially vulnerable groups
- Stimulating entrepreneurship
- Responsible growth
- Jobs

1.4. Organization Chart

1.5 Refinery Process Flow Chart

1.6 Activities – Products

MOTOR OIL Refinery processes several types of crude oil, producing a wide range of oil products that fulfill the strictest international specifications, serving this way oil companies both in Greece and abroad.

Products produced in the Refinery include:

FUELS	
	• Liquefied Petroleum Gas (LPG)
	• Naphtha
	• Gasoline
	• Jet fuels
	• Diesel Oil
	• Fuel Oil
LUBRICANTS	
	• Base lubricants
	• Automotive lubricants
	• Gear Oils
	• Industrial lubricants
	• Marine lubricants
OTHER PRODUCTS	
	• Asphalt
	• Paraffin
	• Solid sulfur

The maximum annual capacity of the main production units is the following:

Atmospheric Distillation Units	7,952.502 MT
Visbreaker	1,314.000 MT
Vacuum Distillation Unit/ Lubricants	823,440 MT
Heavy Hydrocarbons Desulphurization Unit	1,314.000 MT
Naphtha Desulphurization Unit	832,200 MT
Naphtha Catalytic Reforming Unit	569,000 MT
Benzene Hydrogenation Unit (Benfree unit)	444,815 MT
Vacuum Distillation Unit/ FCC	2,741.880 MT
Fluid Catalytic Cracking	1,533.600 MT
Mild Hydrocracker Unit	2,014.800 MT

Storage and distribution premises include:

9 tanks for crude oil storage	1,080,000 m ³
127 tanks for intermediate and final product storage	1,382,400 m ³
Docks for tankers loading and unloading	
Pipelines for transferring raw materials and products	
Truck Loading Terminals	

Company product sales over the last eight years follow a steady uptrend, as it is shown in the table below:

COMPANY SALES (MT x 1000)

The total Refinery production volume for the years 2010 to 2013 is shown in the table below:

REFINERY PRODUCTION (MT x 1000)

The amount of raw materials that the Company processed over the last eight years is shown in the following table:

RAW MATERIALS (MT x 1000)

The quantities of raw materials processed during the last three years, reflect the new operational conditions of the Refinery after the addition of the new Crude Distillation Unit (CDU) having a capacity of 60,000 barrels per day. This unit was commissioned in 2010.

NEW CRUDE DISTILLATION UNIT
60.000 BARRELS / DAY

02 ENVIRONMENTAL MANAGEMENT

2.1 Environmental Management System

Making a continuous and systematic effort, MOTOR OIL has developed and implemented an Integrated Management System that includes Quality (ISO 9001:2008 and ISO 17025:2007), Environment (ISO14001:2004 and EMAS ER 1221/2009), Health and Safety Management (OHSAS 18001:2007) and certification CE marking of Bitumen and bituminous binders in accordance with the European Construction Products Directive 305/2011/EEC and in accordance to the requirements of the European Standard EN 12591:2009.

The scope of the management system concerns the production, trading and delivery of fuels, biofuels, lubricants, waxes, bitumens and special oil products. The Management System consists of a series of mutually interacting processes as it is depicted in the Interrelation Process Diagram, including the production processes, the critical processes as well as the supporting ones.

The explanation of the Integrated Management System acronym terms in the previous diagram of the Integrated Management System are given below:

CBP	Corporate Business Planning
MSM	Marketing Sales Management
TIM	Tank Inventory Management
ROS	Refinery Operating Scheme
DDM	Delivery & Dispatch Management
ENM	Environmental Management
HSM	Health & Safety Management
PMM	Plant Maintenance Management
CSM	Customer Satisfaction Management
PVM	Procurement Vendors Management
QCM	Quality Control Management
HRM	Human Resources Management
QSM	Quality System Management

Environmental Management is included in the Company's supporting processes. The Environmental Management System aims at accomplishing a continuous environmental improvement

in compliance with the current Greek and European environmental legislation through the continuous effort to minimize the diverse operations' impact on the Environment.

The System structure follows the steps of a dynamic cyclical process, as depicted in the following diagram.

MOTOR OIL's Environmental Management System includes the following levels of documentation:

- A Manual of the Integrated Management System, which constitutes a guide for the implementation, maintenance and improvement of the Environmental Management System.
- Procedures – Environmental Management Guidelines, which describe the sequence of actions, the assignment of authorities and the relevant forms.
- Files – Forms and Documents.

One of the main points in planning and implementing the Environmental Management System, is the identification of environmental aspects and the evaluation of the environmental impacts.

The identification of the environmental aspects and the relevant impacts, is accomplished by a wide group of company staff and executives, which includes the Heads of Sections, employee representatives the Head of the Health, Safety and Environment Section, the General Manager of Manufacturing, as well as the Deputy General Manager of Manufacturing, in order to ensure a multilateral approach to the identification and control of the environmental aspects.

The identification of the impacts is accomplished through:

- Inspection of the Refinery process units and other premises
- Investigation of the environmental documentation (manuals, procedures, forms and archives)
- The regular / scheduled or unscheduled (as required) internal audits

The investigation of the environmental impacts takes into account the following:

- Current regulatory requirements and their modifications
- The opinion of stakeholders and related parties
- The operation of the Refinery under
 - › normal conditions
 - › irregular conditions
 - › probable emergency conditions

The environmental impacts are assessed according to a series of criteria; more specifically:

- every legislatively regulated impact is considered important
- every impact related with the environmental policy and/or an already established target / objective of the company is considered important
- every impact for which an objection or a complaint has been raised, or is viewed as significant by relevant stakeholders, is considered important

The assessment method of the environmental impacts is shown on the following diagram, from which the most important environmental impacts are extracted.

2.2 Health, Safety and Environmental Policy (HSE Policy)

MOTOR OIL operates in a way that fully respects / with full regard for Health, Safety and the Environment. To achieve that, MOTOR OIL is committed to:

- Set objectives and targets in order to accomplish a continuous improvement of the implemented management systems concerning Health, Safety and the Environment.
- Meet or exceed the demands of legal and other requirements
- Manufacture products of guaranteed quality that comply with, or exceed Health and Environment Protection specifications for each product, and with efficient use of raw materials, energy and technology.
- Report both good and bad performance, as a responsible corporate citizen.
- Maintain emergency preparedness and response systems and plans, ensuring that all appropriate drills are regularly performed.
- Integrate Health, Safety and Environmental issues into all business decisions, plans and operations in the framework of the Integrated Management System.
- Provide consultation, information and training to employees, contractors and others working on its behalf and ensuring their commitment and awareness.
- Conscientiously and strictly implement the environmental operation terms that define the allowed level of produced wastes.
- Cooperate with all stakeholders so as to develop balanced Health, Safety and Environmental Protection programs, which take into account the needs of all those involved.

At MOTOR OIL, whatever we schedule, plan or do, we do it safely, in an environmentally friendly and a cost-effective manner.

2.3 Environmental Programs, Objectives and Improvements

During the years 2008 - 2013 the company has implemented numerous programs aiming at the minimization of the environmental impacts of its operations, while reducing losses, recovering raw material residues / residues of raw materials and reducing production cost. The programs implemented and their time of completion is shown in the following table:

	2008	2009	2010	2011	2012	2013
AIR						
Improving waste gas emissions monitoring						
- Upgrading the air quality monitoring station at the port for measuring additional pollutants (PM _{2,5})	●					
- Monitoring CO ₂ emissions by measuring carbon concentration in fuel gas. At the same time, accreditation of the MOTOR OIL Chemical Laboratory concerning the measurements of gas emissions.	●					
- Upgrading the air quality monitoring station at the port for measuring additional pollutants (benzene).			●			
- Certification of continuous emissions measuring systems of SO ₂ , NO _x and suspended solids at large combustion plants stacks of fuels, lubricants and MHC units, according international standards (QAL2)					●	●
- Estimation of heavy metals and polycyclic hydrocarbons concentration as a fraction of suspended solids PM ₁₀ in ambient air.					●	●
WATER						
Installation of a system to deal with the foaming problem at the biofilter of the facility.	●					
Aeration of the stabilization tank for the sludge produced by the Waste Water Treatment Plant, in order to improve the quality of the sludge to be processed.	●					
Installation of an on-line chlorine meter at the sanitary wastewater treatment plant output, to improve operation monitoring		●				
Conduct a hydrogeological study to define the water direction of the aquifer, in order to finalize the location of monitoring and control bores.			●			
Utilization of available inactive equipment in the industrial waste water treatment plant.				●		
Installation of Conductivity meters in inlet and outlet of the desalination plant						●
New desalination plant installation						●
SOIL						
Completion of research for managing and neutralizing the sludge from the M-4000 wastewater treatment plant, so that it is suitable for use as an alternative fuel or to be legally disposed at Sanitary Landfills.	●	●				
Tear-down asbestos-cement sheets of 1075 m ² surface and disposal through a licensed company	●	●	●			
Reduction of soil waste quantity stored in the refinery		●

2.4 Environmental Aspects and Impacts

The environmental impacts are classified as [follows]:

- Direct or indirect: This depends on whether the company has or has not the responsibility of their direct handling, taking into account the existing legal context, contracts with clients or suppliers, as well as the feasibility for the company to control the impacts.
- Major or minor depending on whether handling these impacts is controlled by the Environmental Management System.

All the environmental impacts related to the operation of the Refinery have been evaluated according to their significance and among them the following are characterized as important:

- Air emissions from point sources and refinery production processes
- Industrial and Sanitary waste water
- Solid waste, hazardous or not
- Energy and water consumption
- Noise

All the above environmental impacts are monitored and recorded on a regular basis, and relevant measures are continuously taken, so that the Company will act appropriately in order to improve its environmental performance. A similar evaluation of impacts is also carried out during the construction of new projects.

At the same time, the Company has evaluated the indirect environmental impacts resulting from the interaction with third parties, products and services over which the Company does not have any administrative control.

The main environmental aspects associated with gas emissions, liquid and solid waste, and the indirect environmental impacts are described in the following sections.

2.4.1 Waste gas

Air emissions due to the operation of the Refinery units, as well as their sources are shown at the following diagram.

The Refinery takes a series of measures and implements programs - applying best available techniques - aiming at reducing waste gas emissions in the atmosphere. These measures include:

- Treatment of sour and liquid gases before their storage, or their use as a self-consumption fuel, aiming at removing hydrogen sulfide.
- Operation of sulfur recovery units aiming to convert the produced hydrogen sulfide into solid sulfur, which is environmentally friendly.
- Operation of electrostatic filter (ESP) at FCC stack in order to reduce the suspended solid emissions
- Gradual replacement of burners by equivalent with low-NO_x emissions.
- Maximising natural gas usage
- Reduction and control of hydrocarbon emissions by taking several measures, such as the installation of closed circuits in gas processing operations, the routing of gases from safety valves to flares, secondary seals in floating roof tanks, floating covers in oil separators and a Vapor Recovery Unit (VRU) in the Truck Loading Terminal.
- Performance control of burners and boilers.
- Monitoring of air emissions through continuous and periodic measurements.

2.4.2 Waste Water

Wastewater produced in the refinery is distinguished in two categories:

- Industrial wastewater
- Sanitary wastewater

Industrial wastewater, which includes process water, tank drainage, rain water and ballast water is directed either directly, or after some pre-treatment process, to the Industrial Waste Water Treatment plant (secondary treatment), where the pollutant load is reduced, and the water is discharged, according to the environmental provisions and terms.

Sanitary wastewater coming from personnel catering and hygiene areas is treated in an active sludge wastewater treatment system (tertiary treatment). The qualitative characteristics of the treated wastewater are within the defined legislative limits.

2.4.3 Solid Waste

Solid waste generated in the Refinery consists of domestic waste resulting from human activities (consisting of household solid waste such as, paper and metal, food leftovers etc.) and of industrial solid waste (such as scrap materials, spent catalysts, etc.) which is produced during the different stages of the production process.

In order to ensure their safe environmental management and to prevent or reduce the negative consequences on the environment and the human health and safety risk, the Company implements an environmental integrated plan including the waste collection,

transportation and temporary storage or treatment, until the final disposal. The final disposal is performed by licensed companies, depending on the nature of the materials, while the ultimate goal is waste reduction or reuse.

The company submits an annual waste report to the competent authorities of the Ministry of Environment, Energy and Climate Change, where all the waste types and the way of disposal / management, are reported.

In the table bellow, the main types of solid waste produced by the company facilities are presented.

SOLID WASTE MANAGEMENT		
Type of Waste	EWC Code	Management Method
Scrap materials	170407	Recycling
Wood packaging	150103	Recycling
Plastic packaging	150102	Recycling
Paper or cardboard packaging	150101	Recycling
Tyres at the end of their life cycle	160103	Recycling
Used resins	190905	
FCC spent catalyst	160804	Re-export to the suppliers / Recycling
Sludge resulting from tank cleaning (biodegradable material)	050103*	Treatment in the sludge processing unit and biodegradation / stabilization
Alumina	050199	Use as an alternative fuel or as a raw material
Used activated carbon	050199	Use as an alternative fuel
Inactive pellets	050199	Collection and disposal to legal recipient
Recovery linings and refractories from non-metallurgical processes	161106	Collection and disposal to legal recipient
Stabilised wastes other than these reported in the point 190304	190305	Collection and disposal to legal recipient
Waste from electrical and electronic equipment	200136	Recycling
Mixed municipal waste	200301	Collection, Recycling and disposal to legal recipient
Batteries Ni, Cd	160602*	Recycling
Batteries Pb	160601*	Recycling
Used mineral oils	130208*	Usage
Used catalysts	160803/ 160802*	Recovery / Regeneration
Metal Wastes, contaminated by hazardous substances	170409*	Collection and disposal to legal recipient
Other construction and demolition wastes (including mixed wastes) containing hazardous substances	170903*	Collection and disposal to legal recipient
Packaging containing residues of hazardous substances or contaminated by such substances	150110*	Collection and disposal to legal recipient
Laboratory chemicals, consisting of or containing hazardous substances, including mixtures of laboratory chemicals	160506*	Collection and disposal to legal recipient
Fluorescent tubes and other mercury-containing waste	200121*	Collection and disposal to legal recipient
Soil and stones containing hazardous substances	170503*	Collection and disposal to legal recipient
Construction materials containing asbestos	170605*	Collection and disposal to legal recipient
Plastics	200139	Recycling
Packaging Material	150105	Recycling
Mixed Packaging	150106	Recycling
Paper and Cartons	200101	Recycling
Absorbents, materials of filter (including oil filters not otherwise specified), wiping textiles	150202*	Collection and disposal to legal recipient
Glass, plastic and wood containing hazardous substances or contaminated by them	170204*	Collection and disposal to legal recipient
Other hydraulic oils	130113*	Usage
Metals	201140	Recycling

2.4.4 Indirect Environmental Aspects

The indirect environmental impacts are mainly related to the air pollution caused by forklifts and other vehicles, the H/C gas emissions during loading and unloading of the products into the ships, the noise coming from tank truck traffic and vessel stopover in anchorages, the wastewater of AVIN station, as well as the side impacts in case of an accident during the transport of products to and from the refinery either from suppliers or to customers.

Within the framework of the Integrated Management System, the Company evaluates its environmental performance and trains its suppliers, contractors and subcontractors on several environmental issues and continuously gives information to its customers regarding the usage and distribution of the products. At the same time, it investigates new, environmentally mild solutions to its transportation needs and attends to the effective organization of its raw material and product transport.

2.4.5 Environmental Incidents

Having set as main priorities the prevention of the undesirable effects of the operation of the units and the minimization of hazards during operations, the Company aims at the elimination of environmental incidents / accidents.

For that purpose the Company has compiled Emergency Plans that are fully compliant with the local and national plans for fighting pollution through which it provides necessary directions for the making the right decision and taking appropriate action. At the same time, the Company trains systematically its personnel in order to ensure that appropriate action is taken in response to any emergency.

The effectiveness of the above activities is attested to by a record of no environmental incidents / accidents during 2013, as well as in previous years.

03 2013 RESULTS

3.1 Environmental Performance of 2013

3.1.1 Waste Gas Management

Aiming at the minimizing of air emissions, the company fully and constantly monitors the air emissions (point and diffuse emission) through continuous, periodic measurements within the Refinery and also the air quality in the wider area.

The industrial premises of MOTOR OIL utilize modern equipment for monitoring air quality and point emissions coming from different sources during the production process. The Monitoring network of Air Quality consists of a mobile station (A) that has the capability to measure and record continuously pollutants such as hydrogen sulfide (H₂S), sulfur dioxide (SO₂), suspended solids (PM₁₀), suspended solids (PM_{2.5}), nitrogen oxides (NO, NO₂, NOx), methane (CH₄), non-methane hydrocarbons (NMHC), total hydrocarbons (THC), benzene (C₆H₆), carbon monoxide (CO), as well as, meteorological parameters (wind speed and direction, temperature and relative humidity of air). In addition there are three permanent stations for measuring hydrogen sulfide (H₂S) and sulfur dioxide (SO₂). Two out of three permanent stations are located within the refinery premises (B, C), and the third one at the Agioi Theodoroi Police Department (see map).

Moreover, in order to finalize the pollutants measured, the frequency of measurement and the sampling position, concerning the concentration of heavy metals (As, Cd, Ni, Hg) and polycyclic aromatic hydrocarbons in ambient air, samples were collected near the port facilities and analyzed. The results showed that the concentration of pollutants is much lower than the limit values established by the law and no action is needed.

Air emissions are controlled by a network of Continuous measuring devices, which are connected to the Refinery

Control System (DCS) as well as periodic measurements by an Independent, third party.

Continuous measurements are performed to:

- Oxygen in all combustion plants in order to control combustion,
- Sulfur dioxide (SO₂), suspended solids, nitrogen oxides (NOx) and operational parameters (flow, oxygen, pressure and temperature of flue gases) at the Large Combustion Plants (stacks with rated thermal input >50MW).

Note that in 2012 the automated measuring systems in large combustion plants, were certified according International Standards (QAL2), while in 2013, the certification according QAL2 assessed, as specified in standard, according to AST.

- Sulfur dioxide (SO₂), suspended solids, nitrogen oxides (NOx), carbon monoxide (CO) and operating parameters (flow, oxygen, pressure, humidity and temperature of flue gases) at the Catalytic cracker Unit (FCC).
- Sulfur dioxide (SO₂), oxygen and temperature at the exit of Claus units.

At the other stacks, the air emissions are being checked by periodic measurements every three months.

The results of the above measurements are compared with the pollutants' limit values of air emissions and for air quality, as set in the Approval of the Environmental Terms and in the following laws:

JMD 14122/549/E103/11 (FEK 488B)

JMD 22306/1075/E103/07 (FEK 920/08.06.07)

JMD 29457/1511/05 (FEK 992/B/14.07.05)

JMD 36060/1155/E103/2013 (FEK 1450/B/14.06.2013)

A list of Environmental Legislation items that concern the company is offered in Annex I of this Environmental Statement.

Company compliance with the requirements of the Legislation is audited on both a regular and an ad hoc basis. The regular audits are made via the Internal Audits of the Environmental Management System (relevant procedure QSM-02 «Management Evaluations») at least once a year.

The ad hoc audits are made after a decision of the Manufacturing General Manager, or the Technical Dpt. Manager, or the Integrated Management System Section Head, depending on the factual elements contained in the information that is continuously provided to them.

Air Quality:

H₂S, SO₂, NO₂, NO_x, PM₁₀, PM_{2.5}, CH₄, NMHC, THC, CO, Benzene

The results of the monitoring program show that the air quality of the Refinery area is quite satisfactory.

Specifically, the recorded data of 2013 and previous year show that not only there aren't any excesses of the allowed limits set forth in the legislation, but also the observed values are much lower than the marginal ones.

The average hourly, daily and monthly values of pollutants, measured by the mobile station of the Air Quality Monitoring Network for the year 2013, are presented in the following table and the corresponding diagrams.

	H ₂ S	SO ₂	NO ₂	NO _x	CH ₄	NMHC	THC	CO	PM ₁₀	PM _{2.5}	Benzene

It must be noted that the Refinery is not the only source of air pollutants in the wider area of the installations. Other sources of air pollutants are the road traffic (National road Athens – Corinth), the presence of various Industrial Plants and the railway network.

In the diagrams below the concentrations of methane (CH_4), non-methane hydrocarbons (NMHC), total hydrocarbons and carbon monoxide are shown.

Air Quality: H₂S

The refinery has achieved minimization of hydrogen sulfide emissions by upgrading the sour gas processing units as well as the sulfur recovery units.

H₂S concentration is monitored on a daily basis in all of the four stations of the Air Quality Monitoring Network.

Analyzing the results, it is concluded that H₂S concentration in the wider refinery area is remarkably low, according to the measurements of the station located at Agioi Theodoroi (Police Station), the mobile station and the other two refinery stations (T752 and AVIN).

Sulfur dioxide and Nitrogen oxides emissions

In 2007 the emissions of sulfur dioxide were remarkably reduced compared to previous years, despite the expansion of the process units and increased production. This is mainly due to the decrease of the sulfur content in self-consumption fuel.

In 2013, there was an increase of the total sulfur dioxide emissions, and also for the specific index of sulfur dioxide emissions per ton of raw material and per ton of product. This increase was driven by the general economic factors that shaped the oil refining market in 2013, keeping the natural gas prices at very high levels with consequent the reduction of natural gas use and the increase of traditional fuels usage (liquid fuels oil). However the long-term downward trend in emissions, was maintained, as shown in the diagram below.

Sulfur Dioxide Emissions (MT/year)

The reduction of sulfur emissions is achieved through the continuously improved emission control technology used and mainly thanks to the operation of new sulfur recovery units, where the hydrogen sulfide produced is converted to elemental sulfur and the latter is used by fertilizer manufacturers as raw material.

The diagram below shows a plot of the specific sulfur dioxide emissions (MT SO₂ / thousand MT of raw materials) for the last years.

Sulfur Dioxide Emissions / Quantity of raw material (MT / MT x 1000)

The specific index of sulfur dioxide emissions (MT SO₂ / thousand MT of produced products) for the last four years, are shown at the diagram below.

Sulfur Dioxide Emissions / Quantity of produced products (MT / MT x 1000)

The emissions of Nitrogen Oxides (NOx) for 2013 are 2,777 tn and the specific index per thousand MT of produced products for last four years are shown at the diagram below.

NOx emissions / Quantity of produced products (MT / MT x 1000)

Carbon dioxide emissions

Carbon dioxide emissions (according to the European Directive 2003/87/EC) for 2013 were 1,967,681 tones. The annual emissions of carbon dioxide over the last eight years are shown at the diagram below.

CO₂ Emissions (1000 x MT)

The specific carbon dioxide emissions (MT CO₂ / MT of raw materials) for the period 2006 to 2013 are shown at the following diagram, with characteristic declining trend.

CO₂ emissions / Quantity of raw materials (MT / MT)

The specific carbon dioxide emissions (MT CO₂/ MT of produced products) for the last four years are shown at the diagram below.

The reduction of specific carbon dioxide emissions per quantity of raw materials and also per quantity of produced products, were achieved during the last years, due to implementation of Environmental protection projects and also due to the monitoring and checking of emissions.

CO₂ Emissions / Quantity of produced products (MT / MT x 1000)

It is also noted that the quantity of other greenhouse gas emissions except CO₂ (concerning emissions of CH₄, CFCs, SF₆, HFCs και N₂O) are remain practically constant. For 2013 was 69.33 ton and the specific index per quantity of produced products are shown at the table below.

Other Greenhouse gases (except CO₂) / Quantity of produced products (MT / MT x 1000)

Emissions of Volatile Organic Compounds (VOCs)

With the target of reduction and control of Volatile Organic Compounds, the Company has implemented amongst other a series of programs that include the reduction of diffused emissions coming from different sources (oil separators, unit

equipment) and the installation of secondary seals in the floating roof tanks.

Diffused emissions of Volatile Organic Compounds, is a chemical and oil industry characteristic that is not only a source of pollution but also a cause of forgone profits and loss of products for the industry. Thus, the goal of reducing such emissions is dual. The anti-pollutant measures taken in order to reduce the emissions coming from oil product storage and distribution units, include equipment upgrades (tanks, pumps, etc), as well as regular inspections and maintenance of all units, which is very crucial in emissions control. In order to reduce the emissions arising from the loading of tank trucks, a vapour recovery unit has been installed, in conformity with current legislation, which is the most effective and globally accepted measure for minimizing such emissions.

Specifically, in order to check the equipment, the Leak Detection And Repair (LDAR) program is applied, by which the leakages are detected and recorded during regular inspections done by the operators of the various sections. The inspections are carried out by making use of portable devices, and the leakages are fixed the soonest possible.

The number of inspections for the year 2013 is 13,661. The following diagram shows the annual number of inspections for the last years.

Annual number of VOC inspection.

The Leak Detection And Repair (LDAR) program is allocated for 2013, as follows.

DPT	JAN	FEB	MAR	APR	MAY	JUNE	JULY	AUG	SEPT	OCT	NOV	DEC	TOTAL
FUELS	409	706	712	699	566	272	1,137	446	563	708	698	283	7,199

3.1.2 Waste Water Treatment

Industrial wastewater produced by the Refinery's production units is routed, after its pre-treatment, into the industrial wastewater treatment plant, where it is subjected to a sequence of treatment steps that are depicted on the diagram that follows (API Oil Separators, Dissolved Air Flotation (DAF) units, sand filters, biofilters, sludge treatment). At the same time, sanitary wastewater is treated in the sanitary wastewater treatment plant.

The goal of industrial and sanitary wastewater treatment systems is the full treatment of wastewater so that the treated effluent is in compliance with the requirements of current legislation. Wastewater effluents are measured on a daily basis, whereas, a number of programs are implemented aiming at efficiently dealing with the effects of malfunctioning of the treatment units, the automation of their functioning and the optimization of their performance. The quality characteristics of the effluents are shown in the table that follows, where one can conclude that in all cases the measured values are lower than those defined by the legislation.

The results of the measurements are in conformance with the corresponding threshold limits of the parameters, as they are set in the Prefecture Decision 17823 / 79 (Gazette No.1132 / B / 79), which has been modified by the Prefecture Decision A3 / 6533 /81 (Gazette No. 477 / B / 81).

Concentration of polluting parameters at the outlet of the industrial wastewater treatment plant

As far as the results of Industrial Waste of the Waste Water Treatment Plant, are shown below

S/N	Parameter	Average 2013 values	Threshold Limits
1	pH	7.38	6-9
2	Temperature (oC)	25	<35
3	Oil Content (mg/l)	2.2	<10
4	BOD ₅ (mg/l)	24	<40
5	COD (mg/l)	105	<150
6	NH ₃ (mg/l)	13.4	<15
7	Phenols (mg/l)	0.23	<0.5
8	Sulfides (mg/l)	1.1	<2
9	Suspended solids (mg/l)	17	<40

Hydraulic and polluting load of the industrial wastewater treatment plant is as follows:

#	Parameter	Average 2007 values	Average 2008 values	Average 2009 values	Average 2010 values	Average 2011 values	Average 2012 values	Average 2013 values
1	Parameter	10,385	10,297	10,224	10,529	10,663	10,983	9,485
2	Discharge (m ³ /day)	286	265	241	247	256	260	232
3	BOD ₅ (kg/day)	208	174	177	178	190	189	159
4	Suspended solids (kg/day)	2.58	3.79	3.71	3.30	3.01	3.03	2.15

Terminology

BOD : Biochemical Oxygen Demand

COD : Chemical Oxygen Demand

In the following diagram, is shown the specific volume of treated wastewater (1000 x m³/ 1000 x MT of raw materials) for the last five years.

Furthermore, the specific volume of treated waste water per quantity of produced products for the last four years, is as follows:

In the following diagram the variation, during 2013, of the BOD and COD values of the industrial wastewater treatment plant is presented.

At the following table the results of BTEX in the output of industrial wastewater treatment plant for the year 2013, according to the YPEKA instructions are presented:

JMD 4859/726/01 (FEK 253B)	Monthly threshold limits	Daily threshold limits	Average 2013 values
method of measurement			GC/MS
	mg /l	mg /l	mg/l
Benzene	0.5	1	<0.02

3.1.3 Solid Waste Management

Solid waste produced during the refinery's operation is collected and processed according to the relevant legislation (indicatively): Law 2939/01 (Gazette No. 179/A) – Packaging and alternative management of packaging and other products, Ministerial Decree 50910/2727/03 (Gazette No. 1909/B) – Measures and terms for the managing of solid waste, Ministerial Decree 13588/725/06 (Gazette No. 383/B) – Measures and terms for managing hazardous waste), by the following methods:

- Recycling (outside the refinery premises)
- Recovery (outside the refinery premises)
- Processing inside the refinery premises
- Re-usage
- Final disposal (outside the refinery premises)

The Refinery is aiming at the increase of recycling and re-usage of the produced waste. The amount of solid waste that was disposed outside the refinery premises, over the last years, is shown in the following table.

SOLID WASTE MANAGEMENT

	t / year 2008	t / year 2009	t / year 2010	t / year 2011	t / year 2012	t / year 2013	
050199	Waste not otherwise specified	120,60	158.26			44.27	399.34

SOLID WASTE MANAGEMENT

The specific quantity of solid waste per quantity of raw materials for the last five years is as follows:

The fluctuation of the specific quantity of solid waste per MT production is attributed to the replacement of equipment (scrap) during the regular maintenance of the production units (turnaround).

The specific quantity of solid waste in relation to the production (waste/thousand MT of produced products), is shown below:

The total amount of solid waste quantity are 3,115.35 tonnes and from which quantity of 2,886.77 tonnes are non-hazardous waste. Quantity of 228.58 tonnes of solid waste are characterized as hazardous. The specific index of hazardous waste per amount of product for 2013 is: 0.0217 tn / thousand MT of produced products.

3.1.4 Energy Consumption

The energy consumption of the refinery includes the fuel used in combustion processes and the electric power for the operation of mechanical equipment, which is almost exclusively produced by the Power and Steam co-Generation Plant. The refinery fuel mixture includes fuel oil, fuel gas, liquefied gas and natural gas.

The projects that were completed in the previous years, (mainly the introduction of natural gas in the refinery fuel mixture in 2008, the replacement or extensive maintenance of gas turbines, the upgrade of the preheating furnaces, the increase of the recovery level of condensates, the installation of an Advanced Control System, the use of hot streams to preheat cold streams, the maximization of refinery gas usage etc), combined with the systematic monitoring of energy efficiency and the preventive maintenance schedules, contributed to the continuous reduction of the refinery energy consumption over the last years, even though the production volume increased. The energy consumption by the refinery processes for 2013 is 27,139 TJ.

Furthermore, the increase in energy efficiency is shown by the ratio of Energy / thousand of Metric Tons of raw materials.

It must be noted that the amount of raw materials and not that of the end products is chosen as the basis for comparison, because this convention is common and internationally accepted as a benchmark for evaluating the environmental impacts in the oil refining industry (brief: IPPC reference document on best available techniques for mineral oil and gas refineries, February 2003). It also allows for the right interpretation and the evaluation over

time of the environmental efficiency of the refinery.

The specific index of Energy / thousand Metric Tons of produced products is shown below: παρακάτω διάγραμμα.

The reduction in energy consumption has an immediate positive impact both on emitted CO2 and on other pollutants, since its optimization results in minimization of emissions (indicator of efficient use of materials)

Total losses have decreased during the last years compared to those of 2006, as shown in the diagram below.

3.1.5 Water Consumption

Water used for the Refinery's various operations is mostly obtained by sea water desalination, and much less by raw water carried by tank trucks and vessels.

The quantity of water consumed during the last years, are shown at below diagram.

The specific index of water consumption per quantity of raw materials for the last seven years is shown at the diagram below and is an indicator of efficient use of materials.

The specific index of water consumption per unit of produced products (m³ / M.T x 1000 is shown at the following diagram.

It should be emphasized that the water being used in the manufacturing process comes exclusively from the processing of sea water, and consequently, there is no negative impact on the natural resources of the area whatsoever.

It is also pointed out that, in the context of the company's social contribution, amounts of water covering the water supply needs of nearly two hundred neighboring residences are granted free of charge.

3.1.6 Noise

Having set as a goal the reduction of environmental noise levels within and up to the boundaries of the Refinery premises, the Company has taken all the necessary measures, which include the installation of silencers, as well as the purchasing of low noise level equipment.

In order to achieve reduction in the noise levels, sound curtains

have been installed at the aeration units of the wastewater treatment plant.

The noise levels are monitored on a regular basis by conducting measurements at a large number of locations around the Refinery. The positions where measurements are recorded are shown on the following Map.

Indicative measurements for 2013 are presented in the following table:

Locations	Average Measurements January 2013 (dBA)	Average Measurements June 2013 (dBA)	Average Measurements October 2013 (dBA)	Threshold Limits (dBA)
Perimeter of the refinery-	53.0	53.5	52.9	65.0
South perimeter (points 1 to 15)	52.3	52.9	52.1	55.0

04 OBJECTIVES

4.1 New objectives and programs

MOTOR OIL constantly implements new programs and actions aiming at improving its environmental performance, while setting new objectives for the future. The objectives and programs that are planned for the following years are presented in the following table.

OBJECTIVES AND PROGRAMS	2014	2015	2016
AIR			
Improving the alkaline waste treatment, by upgrading unit 6300, in order to reduce the load of odorants / smells	●	●	
Installation of analyzers for continuous measurement of CO, NOx of gas turbines stacks with a rated thermal input > 100 MW	●	●	
Reducing of CO ₂ Emissions (tn/h) in unit M100 by 6% after the furnace F101 replacement with new and more energy efficient furnace.		●	●
WATER / WASTEWATER			
Improving the storage / transportation of chemical substances in normal or emergency conditions, by construction of new storage facility, for the optimal environmental management	●	●	
SOIL / EARTH			
Reduction of the quantity of solid waste stored in the Refinery and implementation of new alternative management methods:			
- Management of the sludge from the dewatering unit of the waste water treatment plant (WWTP)	●	●	
- Alternative management and use of solid waste (catalysts, resins, discoloring earth) by the cement industry (through a licensed disposal company).	●	●	
- Complete the research for managing and neutralizing the sludge from the M-4000 wastewater treatment plant, so that it is suitable to use as an alternative fuel or for disposal at Sanitary Landfills	●	●	
- Alternative treatment of the sludge from the bottom of the tanks after treatment in a decanter	●	●	●

REGISTRATION INFORMATION / NEXT ENVIRONMENTAL STATEMENT

The company is registered in the European System of Ecological Management and Audit Scheme EMAS. Moreover the company is registered in the Greek Ledger of EMAS Organizations with registration number EL000067.

The present Environmental Statement concerns the year 2013. The next Environmental Statement will be edited, verified and issued on July of 2015.

Mr. Spyros J. Sofos, Integrated Management System Section Head is responsible for issuing the Environmental Statements.

1. ORGANIZATION

Company name	MOTOR OIL (HELLAS), CORINTH REFINERIES S.A
Address	Agioi Theodoroi , p.o box 23, 20100
City	Corinth
Postal Code	20100
Country	GREECE
Contact Person	S. J. Sofos
Telephone	27410 - 41800
Fax	27410 - 48255
e-mail address	sofossp@moh.gr
Internet Network	www.moh.gr

Public access to the environmental statement or the updated environmental statement

a) printed form	YES
b) electronic form	YES
Registration number	EL 000067
Registration date	July 2007
Suspension date	
Deletion date

ANNEX I

LEGISLATION LIST

SUBJECT	GREEK AND EUROPEAN COMMUNITY LEGISLATION
Environmental Permissions	<ul style="list-style-type: none"> ▪ Law 1650/86 (Gazette No-160 A') - For the protection of the environment. ▪ Ministerial Decree 69269/5387/90 (Gazette No 678/B 25.10.90) - Categorization of activities and projects. Content of study for the Environmental Impacts, determination of content for special environmental studies and other relevant provisions according to the law 1650/86. ▪ MD 1661/1994 (Gazette No786B/94) - Amendment and supplement the provisions of JMD 69269/5387 - Joint Decision of Ministers of Environment, Public Works and Tourism. ▪ MD 30557/1996 (Gazette No 136B/96) - Amendment and supplement the provisions of the JMD 69269/5387/90 (678 / B). ▪ MD 84230/1996 (Gazette No 906B/96) - Amendment and supplement the provisions of the JMD 69269/5387/90 (678 / B). ▪ Directive 96/61/EC - Of the European Council of 24 September 1996 concerning integrated pollution, prevention and control, as amended by Directive 2008/1/EC and replaced by Directive 2010/75/EC. ▪ Law 3010/02 (Gazette No 91A / 25.04.2002) - Conformity with the law 1650/86, with the Directives 97/11 EC and 96/61 EC, Procedure of delimitation and regulations of issues related to the water streams and other provisions. ▪ Ministerial Decree 11014/703/Φ104/2003 (Gazette No 332/20.03.2003) - Procedure of Preliminary Environmental Assessment and evaluation and approval of the environmental terms according to the article 4 of the Law 1650/1986 as it was replaced from the article 2 of the Law 3010/2002 «Conformity of the Law 1650/86 with the Directives 97/11/EC and 96/61/EC and other provisions». ▪ Law 3325/2005 (Gazette No 68A/2005) Foundation and operation of industrial – manufacture installations in the frame of a sustainable growth and other provisions. ▪ Directive 85/337/EEC For the assessment of the environmental impacts. ▪ Directive 97/11/EEC which modifies the Directive 85/337/EEC. ▪ Law 3982/2011 (Gazette No 143/A/17.6.2011) - Simplify of licensing professional technical and manufacturing activities, business parks and other provisions. ▪ Law 4014/2011 (Gazette 209/A/21.09.2011) - Environmental permission of projects and activities, regulation of illegal constructions in accordance with environmental balance and other provisions of Environmental Ministry. ▪ Ministerial Decree 1958 (Gazette No 209/A/2011) - Categorization of public and private projects and activities according to the article 1 of law 4014/21.09.2011. ▪ MD 20741/2012 (Gazette No 1565 / B ` / 8.5.2012) - Amendment of 1958/13.12012 decision of the Minister of Environment, Energy & Climate Change, about « Classification of public and private projects and activities into categories and subcategories according to Article 1, paragraph 4 of Law 4014/21.9.11 (209 / A) «(21 / B) ▪ MD 21697/2012 (Gazette No 224/YODD/--/3.5.2012) - Establishing of a Central Council environmental permitting (KESPA) in accordance with paragraph 1 for article 13 of Law 4014/2011 (209 / A). ▪ MD 48963/2012 (Gazette No 2703 / B ` / 5.10.2012) - Specifications of content of environmental permits for projects and activities under the Category A No. 1598/13.1.12 Minister's decision environment, Energy and Climate Change (21 / B), as applicable in accordance with Article 2 § 7 of Law 4014/11 (209 / A). ▪ MD 166476/2013 (Gazette No 595 / B 03.14.2013) - Amendments of 1958/13.1.2012 (Gazette 21 / B) of the Minister of Environment, Energy & Climate Change about «Classification of public and private projects and activities into categories and subcategories under Article 1 § 4 of the Law 4014/21.9.11 (GG 209 / A) », as amended by Decision No. 20741/8.5.2012 (Gazette No 1565 / B). ▪ MD 65150/1780/2013 (Gazette 3089 / B / 04.12.2013) - Replacement of Annex VII of MD 1958/2012 'Classification of public and private projects and activities into categories and subcategories in accordance with Article 1, paragraph 4 of Law 4014/21.09.2011 (Gazette 209/A/2011) »(21 / B), as applicable. ▪ MD 170225 (Gazette 135V/27-01-2014) - Specialized of File contents for environmental permitting projects and activities of the Class A, of the Minister Decision of Environment, Energy and Climate Change No. 1958/2012 (B 21) as applicable, in accordance with Article 11 of Law 4014/2011 (A 209), as well as any other relevant detail.
Air pollution	<ul style="list-style-type: none"> ▪ Presidential Decree 1180/81 (Gazette No 293 A) - «About regulation of issues related to the foundation and operation of industries, manufactures, all nature of mechanical installations and storages for the insurance of the environment». ▪ Directive 92/42/EEC Of the Council at 21.05.1992 on efficiency requirements for new hot-water boilers fired with liquid or gaseous fuels. ▪ Ministerial Decree 11294/93 (Gazette No 264/B)- Terms of operation and approved limits of gas waste emissions from the industrial boilers. ▪ Ministerial Decree 11641/1942/2002 (Gazette No 832/B/ 02.07.2002) - Measurements and terms for the reduction of the Volatile Organic Compounds (VOC) Emissions which are resulted from the use of organic solvents in some activities and installations (Gazette No 832B/02.07.2002). ▪ MD 29457/1511/2005 (Gazette No 992B/05) - Establishment of measures and procedures to reduce emissions of certain pollutants from large combustion plants, in compliance with the provisions of Directive 2001/80/EC about «the limitation of emissions of certain pollutants from large facilities «of the Council of 23 October 2001.

SUBJECT	GREEK AND EUROPEAN COMMUNITY LEGISLATION
Air pollution	<ul style="list-style-type: none"> ▪ MD 22306/1075/E103/2007 (Gazette No 920B/07) - Establishment of Objectives and limits assessment of concentrations of arsenic, cadmium, mercury, nickel and polycyclic aromatic hydrocarbons in ambient air, in compliance with the provisions of Directive 2004/107/EC about «Relating to arsenic, cadmium, mercury, nickel and polycyclic aromatic hydrocarbons in ambient air «of the Council of 15 December 2004». ▪ Ministerial Decree 37411/1829/E103 (Gazette No B 1827/11 September 2007) - «Determination of the appropriate values, meters and procedures for the application of the Regulation 2037/2000 of the European Parliament and of the Council of 29 June 2000 «on substances that deplete the ozone layer». ▪ MD 14122/549/E. 103/2011 (Gazette No 488B/11) - Measures to improve air quality in compliance with the provisions of Directive 2008/50/EC about «the ambient air quality and cleaner air for Europe» of the European Parliament and of the Council of the European Union on 21 May 2008». ▪ MD 10735/651/2012 (Gazette No 2656/B/28.9.12) - Installation, Operation and Control of Steam Boilers. ▪ JMD 36060/115/E.103 (Gazette 1450/V/14.6.2013) - Definition guidelines, measures and procedures for the prevention and control of pollution from industrial activities, in conformity with the provisions of Directive 2010/75/EE "about industrial emissions (integrated pollution prevention and control)" of the European Parliament and of the Council of 24 November 2010. ▪ MD 26910/852/E103/2013 (Gazette 1021/B/04.25.2013) -Amendment of JMD 54409/2632/2004 'trading scheme for greenhouse gas emission in compliance with the provisions of Directive 2003/87/EC ... etc» (1931 / B), as applicable, in compliance with the provisions of Directive 2009/29/EC «amending Directive 2003/87/EC, in order to improve and extend the trading system greenhouse gas emissions of the Community» by the European Parliament and of the Council of 23 April 2009».
Hazardous waste	<ul style="list-style-type: none"> ▪ Directive 78/319 of 20.03.78 for toxic and hazardous wastes. ▪ Directive 91/689/EEC of 12.12.1991 for hazardous wastes. ▪ Decision 94/904/EEC of 22.12.1994. ▪ Commission Decision 96/350/EC of 24.05.1996 adapting Annexes IIA and IIB to Council Directive 75/442/EEC on waste. ▪ Ministerial Decree 13588/725/2006 (Gazette No 383/B/28.03.2006) - «Measures, terms and restrictions for handling hazardous wastes according to the Directive 91/689/EEC for hazardous waste» Replacement of the Ministerial Decree 19396/1546/1997 «Measures and terms for handling hazardous waste». ▪ Ministerial Decree 24944/1159 (791 B / 2006) - Approval of the General Technique Specifications for handling the hazardous wastes according to the article 5 (paragraph B) of the 13588/725 common ministerial decision «Measures, terms and restrictions for handling the hazardous wastes etc» (B' 383) and in conformity with the provisions of the article 7 (paragraph 1) of the Directive 91/156/EEC of the 18 March 1991 Council». ▪ Ministerial Decree 8668/2007 (Gazette No 287 B / 2.03.2007) - Approval of national planning of Handling Hazardous Wastes according to the article 5 (paragraph A) 13588/725 common ministerial decision «Measures, terms and restrictions for handling the hazardous wastes etc» (B' 383) and in conformity with the provisions of the article 7 (paragraph 1) of the Directive 91/156/EC of 18 March 1991 Council». Modification of the Ministerial Decree 13588/725/2006. ▪ MD 52167/4683/2012 (Gazette No 37/B/12) - Adaptation of Greek legislation to the provisions of Directive 61/2010/EE of 2nd September 2010 adapting to scientific and technical progress of the Annexes of Directive 2008/68/EC of the European Parliament and of the Council about the internal transport of hazardous goods. ▪ MD 146163/2012 (Gazette No 1537/B/12) - Measures and conditions for waste management of healthcare activities.
General Waste	<ul style="list-style-type: none"> ▪ Directive 91/156 EEC of 18.03.91 which modifies the Directive 75/442 for waste. ▪ Directive 94/62/EC of 20.12.1994 of packaging and packaging waste. ▪ Ministerial Decree 114218/97 (Gazette No B 1016) - «Creation of a frame with the specifications and general programs for managing the solid waste». ▪ Law 2939/2001 - «Packaging and alternative management of packaging and other products. Foundation of National Organization of Alternative Management of Packaging and other products. ▪ Ministerial Decree 50910/2727/2003 - «Measurements and terms for managing the solid wastes – National and Regional Planning of Management». ▪ Directive 2006/12/EC of the European Parliament and of the Council of 5 April 2006 on waste. ▪ Ministerial Decree 9268/469/2007 (B 287/2007) - Modification of the quantitative objectives for the recuperation and recycling of the waste packaging according to the article 10 (paragraph A1, last section) of the law 2939/2001 (A' 179), as well as other provisions of this law, in conformity with provisions of the Directive 2004/12/EC «amending Directive 94/62/EC on packaging and packaging waste» of the Council of 11 February 2004. ▪ L. 3854/2010 (Gazette No 94/A/10) – Amendment of legislation for alternative management of packaging and other products, and the National Organization of Alternative Packaging Management and Other Products and other provisions. ▪ JMD 8111.1/41/09 - Measures and conditions for port reception facilities for ship generated waste and cargo in compliance with the provisions of Directive 2007/71/EC. Replacement of JMD 3418/07/02 (GG 712 B) «Measures and conditions for port reception facilities for waste generated on ships and cargo residues.» ▪ Eg. oik 24040/2590/2013 - Implement legislation on cross-border transportation of non - hazardous waste.

SUBJECT	GREEK AND EUROPEAN COMMUNITY LEGISLATION
Electrical and Electronic equipment	<ul style="list-style-type: none"> ▪ Presidential Decree 117 of 5.04.2004 - «Measurements, terms and programs for alternative management of the waste which result from the electric and electronic equipment», in conformity with the provisions of the Directive 2002/95 «on the restriction of the use of certain hazardous substances in electrical and electronic equipment». ▪ Presidential Decree 15/2006 (Gazette No 12/ A' /3.02.2006) - Modification of the presidential decree 117/04 (82/A), in conformity with the provisions of the Directive 2003/108/EC of the European Council of 8 December 2003 amending Directive 2002/96/EC on waste electrical and electronic equipment (WEEE). ▪ MD 133480/2011 (Gazette No 2711/B/11) - Amendment of Annex IB of PD 117/2004. ▪ JMD 23615/651/E.103 (Gazette 1184V/09-05-2014) - Definition of rules, terms and conditions for the alternative management of waste electrical and electronic equipment (WEEE) in compliance with the provisions of Directive 2012/19/EK "about waste electrical and electronic equipment (WEEE), «the European Parliament and of the Council of 4 July 2012 and other provisions».
Lead Batteries and Accumulators	<ul style="list-style-type: none"> ▪ Presidential Decree 115/2004 (Gazette No 80A / 2004) - «Replacement of Ministerial Decree 73537/1438/95 "For the electrical columns and accumulators which consist certain hazardous substances" (B781) and 19817/2000 Ministerial Decree «Modification of 73537/1438/95 Ministerial Decree etc» (B' 963) Measurements, terms and program for alternative management of electrical columns and accumulators». ▪ Ministerial Decree 41624/2057/E103(Gazette No 1625 B/2010) - Measurements, terms and program for alternative management of the waste, electrical columns and accumulators in conformity with the provision of the Directives, 2006/66/EC and 2008/103/EC of the European Parliament and Council.
Waste oils	<ul style="list-style-type: none"> ▪ Directive 75/439/EEC of 16.06.1975 on the disposal of waste oils. ▪ Directive 87/101/EEC About the disposal of waste oils. ▪ Presidential Decree 82/2004 Of 02.04.2004 (Gazette No 64/2004) - «Replacement of Ministerial Decree 98012/2001/96 "Determination of the measurements and terms for managing the used waste oils". Measurements, terms and program of alternative management of waste lubricant oils».
Tyres	<ul style="list-style-type: none"> ▪ Directive 94/62/EC of 20.12.1994 on packaging and packaging waste. ▪ Presidential Decree 109/2004 - «Measurements and terms for managing the used tyres of vehicles. Measurement for their management».
Noise	<ul style="list-style-type: none"> ▪ Presidential Decree 1180/81 (Gazette No 293 A) - «About regulation of issues related to the foundation and operation of industries, manufactures, all nature of mechanical installations and storages for the insurance of the environment». ▪ Directive 2000/14/EC on the approximation of the laws of the Member States relating to the noise emission in the environment by equipment for use outdoors. ▪ Directive 2002/49/EC of the European Parliament and of the Council of 25 June 2002 relating to the assessment and management of environmental noise. ▪ Ministerial Decree 37393/2028/2003 (Gazette No 1418B) - Measurements and terms for the noise emission in the environment by equipment for use outdoors. ▪ Ministerial Decree 13586/724/2006 (Gazette No 384B) - «Determination of measurements, terms and methods for assessment of the management of noise in the environment, in conformity with the provision of the Directive 2002/49/EC «related to the assessment and management of environmental noise» of the Council of 25.06.2002. ▪ MD 9272/471/2007 (Gazette No 286/B/07) - Amendment of Article 8 of JMD No. 37393/2028/2003 (1418 / B), in compliance with the provisions of Directive 2005/88/EC about «amending Directive 2000/14 / EC on the approach of the laws of Member States relating to the noise emission in the environment by equipment for use outdoors» of the Council of 14 December 2005.
