MANAGEMENT MESSAGE

I am very pleased to introduce the year 2016 edition of the Environmental Statement of MOTOR OIL (HELLAS) CORINTH REFINERIES S.A., prepared in accordance with the European Regulation 1221/2009 for EMAS (Eco Management and Audit Scheme). The Environmental Statement is published on a voluntary basis for the eleventh year running by our Company, a member of the Greek Register of EMAS organizations since 2007 bearing registration number EL000067.

The protection of the Environment, the rational management of environmental issues and the full compliance with the requirements of the Greek and European legislation are top priorities for MOTOR OIL (HELLAS) CORINTH REFINERIES S.A. For this purpose, MOTOR OIL (HELLAS) CORINTH REFINERIES S.A. has developed and implements the Integrated Management System, and adopts up-to-date methods procedures and technologies for environmental protection, while conforming to the stringent international standards.

MOTOR OIL (HELLAS) CORINTH REFINERIES S.A., carrying out its business with foresight and responsibility and having fully integrated the notion of sustainable development into its daily operations and future plans, continuously invests in projects for reducing its environmental footprint by adopting Best Available Techniques, which lead to the reduction of emissions and of the overall environmental impacts, to the optimal management of natural resources, to energy saving, as well as the more efficient management of all by-products and waste resulting from its operations.

At the same time, the Company's investment approach contributes decisively to the environmental sustainability and economic prosperity of the local communities, which host our operations, as well as to the overall economy of our country.

In this sense, MOTOR OIL (HELLAS) CORINTH REFINERIES S.A has completed a significant number of investment projects and has achieved reductions in:

- energy consumption per ton of produced products, from 3.025 TJ/thousand MT in 2010 to 2.373 TJ/thousand MT in 2016.
- the outflow of treated waste water per ton of products, from 0.445 m^3/MT in 2010 to 0.303 m^3/MT in 2016
- carbon dioxide emissions from 0.258 MT/MT of raw materials in 2006 to 0.179 MT/MT in 2016
- sulfur dioxide emissions from 0.922 MT/thousand MT of raw materials in 2006 to 0.264 MT/thousand MT in 2016.

It is thus confirmed that the Company's environmental performance kept improving in 2016 as well, as we achieved high production goals at reduced emissions and lower consumption of natural resources.

It should be noted that during the summer of 2016 an extensive program of maintenance and technical upgrades was carried out at the Refinery without any environmental incident.

In the present Environmental Statement, you may find information regarding the Refinery units and various Refinery production processes, our Environmental Management policy, the assessment of our Environmental performance in 2016, and the new objectives to which we commit ourselves.

The ultimate responsibility for the effective implementation of the environmental protection measures and for the health and safety of Company personnel rests on me.

All employees of MOTOR OIL (HELLAS) CORINTH REFINERIES S.A. participate in the implementation of the Environmental Management System through the relevant training, the participation in related work groups, the execution of the internal inspections programme, and, the carrying out of emergency preparedness drills.

I hope that you will find this Statement not only informative but also interesting.

At this point, I would like to say that I consider the publication of the Environmental Statement as an opportunity to communicate with our associates and all stakeholders with regard to the performance of MOTOR OIL (HELLAS) CORINTH REFINERIES S.A. on the aspect of environmental management and, within this framework, my colleagues and I remain at your disposal for any queries or comments you might have.

> M. J. Stiakakis Manufacturing General Manager

01 COMPANY PRESENTATION

1.1 General Information

MOTOR OIL is a leading Company in the oil refining industry supplying its customers with a wide range of high quality products. The Company has evolved to one of the main pillars of the national economy, while, at the same time, it maintains and expands its key role in the wider area of South Eastern Europe.

MOTOR OIL started operating in 1972 as a company engaged in refining and trading of oil products and has been responsibly functioning ever since, aiming at sustainable profitability and socially responsible growth. The Company's Vision and Mission define the context which drives the planning and implementation of its dynamic growth. In addition, company operation is based on a set of strict Principles and Values, which comprise the constituent elements of its business practices.

MOTOR OIL's Vision and Mission are based on three basic principles:

- Respect for our Employees
- Respect for the Environment
- Transparency

Materializing the Corporate Vision and Mission is based on three corporate values:

Integrity

4

- Effectiveness
- Social Accountability

The Company Refinery is located at Agioi Theodoroi, Corinth, approximately 70 km from the center of Athens and the area of the premises of the facility is 1,571.8 acres (Biodiversity Index). Along with its auxiliary premises and its fuel distribution premises, the Refinery constitutes the largest private industrial complex in Greece, and is considered as one of the most modern and flexible refineries across Europe, with Nelson Complexity Index of 11.54.

It can process different types of crude oil, producing a wide spectrum of oil products that meet the strictest international standards, which makes it able to serve the supply requirements of large customers both in Greece and abroad.

At the same time, it is the only Refinery in Greece that has a lubricants production complex. Apart from the basic units, (atmospheric distillation, catalytic reforming and hydrotreating) the refinery includes conversion units as well (thermal, catalytic cracking, and hydrocracking).

The industrial plant of the Company has an operating license which has been granted by Y.P.A.N (Hellenic Republic Ministry of Development / Department of Energy / Department of Oil Installations / section A: D.3/A/6841 – 16.08.2007, while the Atmospheric Distillation unit U-7100 the operating license is granted by YPEKA – Ministry of Environment, Energy & Climate Change/Department of energy and climate change / Department of Oil Installations / section A: D.3/A./14094, date 12-11-2010) and they fulfill the legal requirements, which demand the application of Best Available Techniques, measures for the protection of the ground, water and air, threshold limits for waste emission, emergency response measures (leakages, malfunctions, interruptions), waste management measures as established in the permits from Y.P.E.K.A (Approval of the Environmental Operating Terms – Y.P.E.K.A/Department of Air Pollution and Noise Control / Section of Industries : 145996/date 22.06.2009, 188358/date 10.10.2011 and 183581/date 17.10.2013, Y.P.E.K.A/Department of Air Pollution and Noise Control / Section of Industries : 162429 / date 11-9-2014, Y.P.EN/ Section of Industries: 42076 / date 01-09-2016 and Y.P.EN/ Section of Industries: 39292 / date 23-12-2016), which are in a total conformity with the European legislation (Directive 2010/75/EC - IED).

Also, the Refinery has a license for Greenhouse Gases Emissions with number YPEKA/Department of Environment/Department of Air Pollution and Noise Control /GEDE 214048 – 31/12/2012, and approved monitoring plan for air emissions by the Ministry of Environment and Energy/General Directorate of Environmental Policy/Directorate of Climate Change and air quality/department of market mechanisms and emissions register: 62210 / date 09-01-2017.

The following table summarizes the company data.

Statistical Codification of Economic Activity:	232
NACE Code	DF.19.20 - Manufacture of refined petroleum products
Premises:	Agioi Theodoroi, Corinth
Installed Power:	Main electric motors power 80.82 MW Back up electric motors power 49.13 MW
Postal Address:	71st km of Old National Road Athens – Corinth, position «Soussaki»

Responsible for Health, Safety and Environment	Evangelia Stefa

Vardinoyannis Group is the major shareholder of MOTOR OIL. In 2001 the Company listed its shares on the Athens Exchange following a share capital increase by the means of an Initial Public Offering (IPO).

The shareholder structure of the Company as of 31.12.2016 is presented hereunder:

SHAREHOLDERS	%
Petroventure Holdings Limited	40.00
Doson Investments Company	6.07
Free Float	53.93
Total	100.00

COMPANY PRESENTATION 01

1.2 Timeline of Company's Growth MOTOR OIL commenced its operations in 1972 and since then took signific

Foundation and beginning of operation of the refinery comprised of a crude oil refining unit, a base lubricants production unit and port facilities.	1972	1975	Construction of an Atmospheric Distillation Unit, with a capacity of 100,000 barrels/ day and tanks with a capacity of 1.5 million m ³ .
Construction of a Catalytic Reforming Unit (further processing of naphtha for gasoline production).	1978	1980	Installation of a Fuel Catalytic Cracking Unit (processing of fuel oil into high added value products).
Construction of a Power Plant that uses fuel gas as raw material. License to sell electric power to the national grid.	1984	1993	Quality Management System certification according to ISO 9002 standard, concerning all the activities of the Company
Purchase of 50% of the Company's shares by Aramco Overseas Company BV, 100% subsidiary of Saudi Arabian Oil Company [Saudi Aramco]. Relocation of Company Headquarters to a modern building in Marcousi. Attica.	1996	2000	Manufacture of products according to European Union standards for the year 2000, by constructing new units and converting the naphtha
Share capital increase by the means of an Initial Public Offering (IPO) and listing of Company shares on the Athens Exchange. Installation of the new gas turbine at the Power Plant. Upgrade of lubricants	2001	2000	reformer to a continuous 103 octane reformation unit (CCR). New Central Control Room and installation of a Distributed Control System (DCS). Environmental Management System certification according to ISO 14001:1996 standard.
vacuum unit. Development of a Quality Management System according to ISO	2002	2002	100% acquisition of AVIN OIL, a domestic retail marketing oil company
9001:2000 standard, which was certified on January 2003	2003	2004	Re-certification of the Environmental Management System according to ISO 14001.2004 for three more years. Beginning of
Beginning of operation of a Hydrocracker unit that enables the production of clean fuels according to 2005 and 2009 European Union specifications. Acquisition of the stake of Aramco Overseas Company B.V. in the Company by Motor Oil Holdings S.A.	2005		operation of the Truck Loading Terminal at the Refinery. Re-certification according to ISO 9001.2000 for three more years
Re-certification of the company Environmental Management System	2007	2006	(until 2009). Accreditation of the Refinery Laboratory according to ISO 17025:2005.
according to ISO 14001:2004, valid until 2010. Company Registration in the Greek Ledger of EMAS (Eco Management Audit Scheme).	2007	2008	Certification of the Occupational Health and Safety Management System according to OHSAS 18001.2007. Safe implementation of the largest in company history refinery shut down program for periodic maintenance work.
Re-certification of the Integrated Management System according to the new ISO 9001:2008 standard, valid until 2012. At the same time some significant strategic initiatives were taken: Agreement with Shell International Petroleum Company	2009		Start of construction of the New Crude Distillation Unit. The non- governmental organization "Ecocity" awards our company, for the second consecutive year, the "OIKOPOLIS 2008 - Environmental Investment" prize
for acquiring its downstream operations in Greece (except for Lubricants), start of the construction of the KORINTHOS POWER S.A. natural gas power plant, acquisition by MOTOR OIL Group of an additional 64.06% stake in OFC Aviation Fuel Services SA, with which the total Group share reached 92.06%.		2010	Beginning of operation of the new 60,000 barrels per day atmospheric distillation complex. Beginning of the installation of a fifth gas turbine at the Power Plant (17 MW natural gas unit). Re-accreditation of the Refinery Chemical Laboratory according to CO 2000 for the the turbus et 2001 (
Re-certification of the Occupational Health and Safety Management System according to OHSAS 18001.2007, valid until 2014. Certification CE marking of Bitumen and bituminous binders in	2011		ISO 17025:2005, with validity until 2014. Re-certification of the Environmental Management System according to ISO 14001:2004 with validity until 2013. Successful completion of the acquisition of Shell downstream operations in Greece.
accordance with European Directive 89/106/EEC Construction Products, as amended by 93/68/EEC and in accordance with the requirements of the European Standard EN 12591:2009. Completion of the construction of the fifth Gas Turbine unit (GT#5). With the addition of this Gas Turbine unit, the installed power of the Refinery Cogeneration Power Plant amounts to 85MW and		2012	Re-certification of the Integrated Management System according to ISO 9001:2008 standard, valid until 2015. Extending the scope of accreditation of the Refinery Chemical Laboratory according to ISO / IEC 17025:2005.
ensures for the Refinery full energy self-sufficiency, due to the addition of CDU.		2014	Re-certification of the Integrated Management System according to ISO 9001.2008 standard, of the Environmental Management System according to ISO 14001.2004, and of the Occupational Health and Safety Management System according to OHSAS 18001.2007, with
CE Marking certification of Bitumen and bituminous binders, in accordance with the European Construction Products Directive 305/2011/EEC and the requirements of European Standard EN 12591:2009, valid until the year 2017.	2013		validity until 2017. Re-accreditation of the Refinery Chemical Laboratory according to ISO 17025:2005, with validity until 2018.
Approval of the separation of activities of CYCLON HELLAS by the relevant Competent Authorities (Piraeus Chamber of Commerce & Industrial) Transfer of the rate if the rate in the set of the MIN (In a set of the rate).	2015		Completion of the acquisition of 100% of the share capital of the listed on the Athens Exchange company CVCLON HELLAS S.A. through a mandatory tender offer submitted by MOTOR OIL.
Industry). Transfer of the retail fuel business to AVIN OIL and of the lubricants & marketing business to the newly established L.P.C. S.A.		2016	By decision of the Annual Ordinary General Meeting of 8 June 2016, the participation of MOTOR OIL with a percentage of 65% in MOTOR OIL VEGAS UPSTREAM (MVU) LIMITED was approved. MVU engages in the exploration and production (E & P) of potential new oil resources (upsteam). MOTOR OIL (HELLAS) CORINTH REFINERIES S.A has developed, implemented and maintains a Sustainability Management System of Biofuel that procures and markets in accordance with the 2BSvs standard.
			The System fully complies with the requirements of the standard and the applicable national legislation as established by the adoption of the European Directive 2009/28/EC (RED) as it was amended and is in force.

COMPANY PRESENTATION 01

1.3 Corporate Social Responsibility (CSR)

MOTOR OIL fully embraces the importance of the effort for sustainable growth via the application of the principles and objectives of Corporate Social Responsibility. It expresses its social responsibility with the commitment that its activities are based on respect for people, the environment and society. A natural outcome of this commitment is a holistic approach to the application of the principles of Corporate Social Responsibility, taking into consideration the protection of the environment, as well as the stakeholders - its personnel, the shareholders, the customers, the suppliers and society as a whole.

MOTOR OIL is a founding member of the Hellenic Network for Corporate Social Responsibility, and has subscribed and participates in the initiative of the United Nations Organization for the UN Global Compact, the aim of which is to direct the enterprises to sustainable growth through voluntary and responsible behavior and actions.

CSR indicates the balanced approach to the financial, social and environmental impact of company operations according to the three dimensions "society - environment - economy" that are globally accepted by the responsible members of the business community. These outline the main objectives of an organization to create value for its shareholders, while at the same time caring for the satisfaction of its customers, its personnel, the environment and society in general.

Relevant to this is also the concept of sustainable growth, meaning the growth that aims at covering today's needs without jeopardizing the availability of resources for future generations

Consequently, MOTOR OIL is committed / pledges to fully conform with the ten principles of the UN Global Compact, regarding:

- Human rights,
- Labor
- The environment and
- Transparency (anti-corruption)

Amongst the challenges that MOTOR OIL faces, the most important ones are related with managing Health, Safety and the Protection of Environment. The frame for the management of these challenges and the achievement of continuous improvement in these particular sectors, according to the principles of Corporate Social Responsibility and the UN Global Compact, is defined by the policy for Health, Safety and the Environment.

CORPORATE RESPONSIBILITY MANAGEMENT MODEL

HUMAN RESOURCES

• Health and safety

• Employment rights and equal opportunities

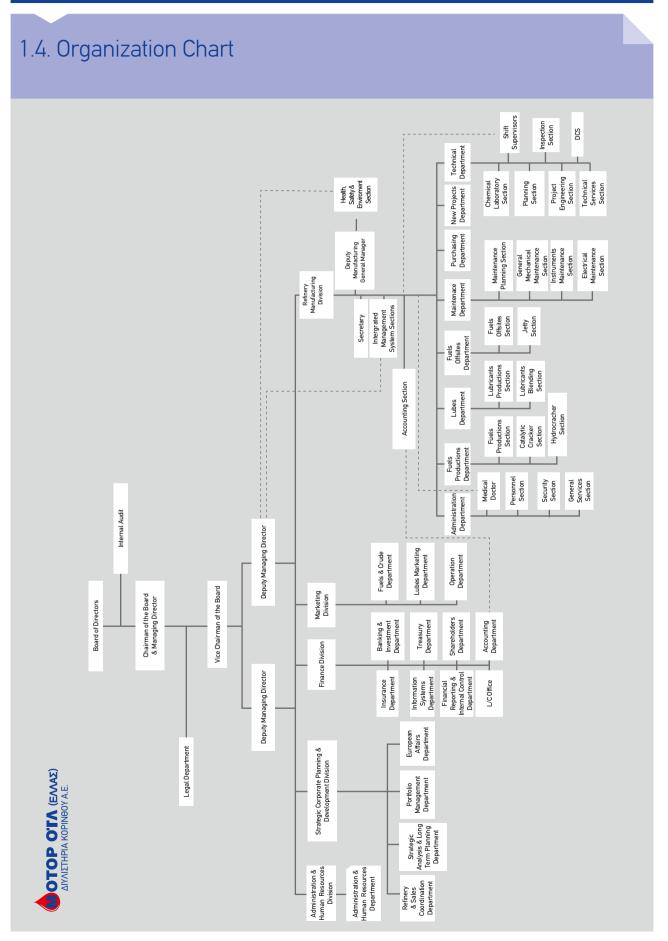

ENVIRONMENT

- Clean fuels
- Redused emissions
- Rational energy management
- Technical optimization

THE PUBLIC

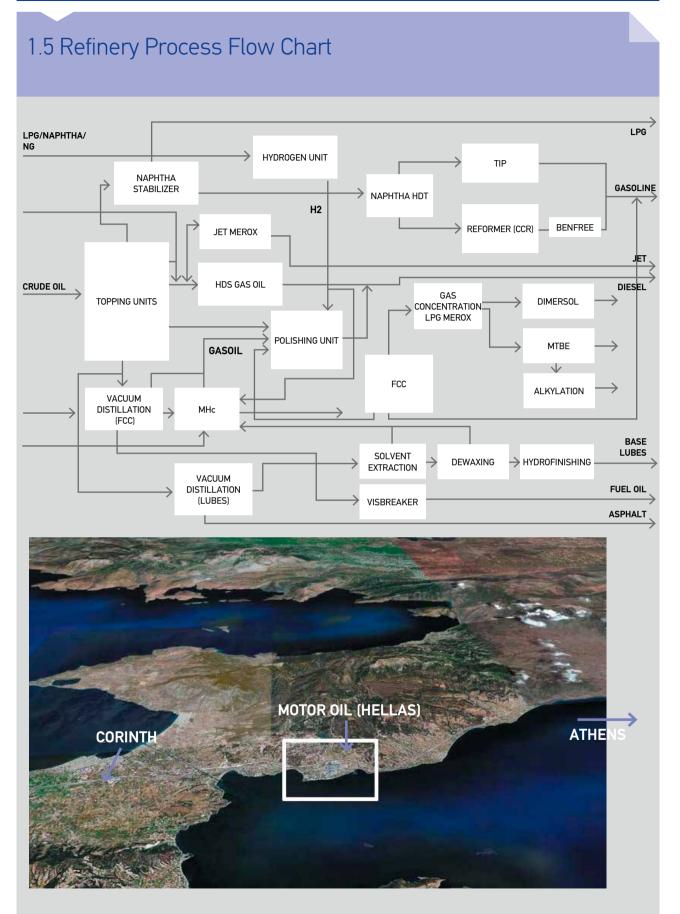

- Contribution to culture, sports and the environment
- Support for socially vulnerable
- Stimulating entrepreneurship
- Responsible growth
- Jobs

COMPANY PRESENTATION 01

ENVIRONMENTAL STATEMENT 2016

1.6 Activities – Products

MOTOR OIL Refinery processes several types of crude oil, producing a wide range of oil products that fulfill the strictest international specifications, which makes it able to serve the supply requirements of large customers both in Greece and abroad.

Products produced in the Refinery include:

FUELS					
	• Liquefied Petroleum Gas (LPG)				
	• Naphtha				
	• Gasoline				
	• Jet fuels				
	• Diesel Oil				
	• Fuel Oil				
LUBRICANTS					
	• Base lubricants				
	Automotive lubricants				
	• Gear Oils				
	Industrial lubricants				
	Marine lubricants				
OTHER PRODUCTS					
	• Asphalt				
	• Paraffin				
	• sulfur				

The maximum annual capacity of the main production units is the following:

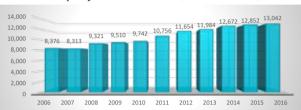

Atmospheric Distillation Units	7,952,502 MT
Visbreaker	1,638,120 MT
Vacuum Distillation Unit/ Lubricants	823,440 MT
Heavy Hydrocarbons Desulphurization Unit	1,314,000 MT
Naphtha Desulphurization Unit	832,200 MT
Naphtha Catalytic Reforming Unit	569,000 MT
Benzene Hydrogenation Unit (Benfree unit)	444,815 MT
Vacuum Distillation Unit/ FCC	2,741,880 MT
Fluid Catalytic Cracking	1,533,600 MT
Mild Hydrocracker Unit	2,014,800 MT

Storage and distribution premises include:

9 tanks for crude oil storage	1,080,000 m ³
129 tanks for intermediate and final product	1,389,555 m ³
storage	
Docks for tankers loading and unloading	
Pipelines for transferring raw materials and	
products	
Truck Loading Terminals	

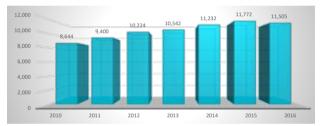

The Company product sales volume followed a constantly upward trend over the last years as presented in the next diagram:

Company Product Sales (thousand MT)

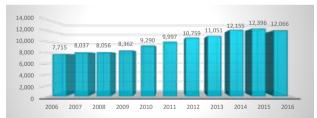

The total Refinery production volume for the years 2010 to 2016 is shown in the diagram below:

Refinery Production (thousand MT)

The amount of raw materials that the Company processed over the last years is shown in the following diagram:

Raw Materials Processed Quantity (thousand MT)

ENVIRONMENTAL STATEMENT 2016

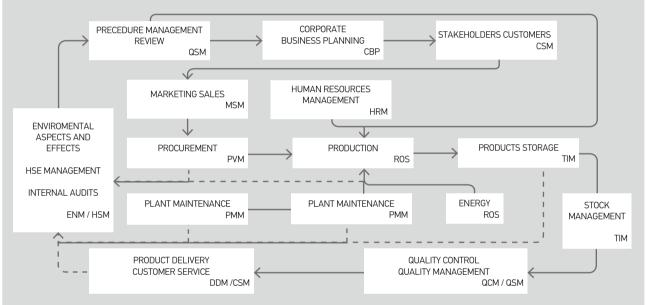

02 ENVIRONMENTAL MANAGEMENT

2.1 Environmental Management System

Making a continuous and systematic effort, MOTOR OIL has developed and implemented an Integrated Management System that includes Quality (ISO 9001:2008 and ISO 17025:2007), Environment (ISO14001:2004 and EMAS ER 1221/2009), Health and Safety Management (OHSAS 18001:2007) and certification CE marking of Bitumen and bituminous binders in accordance with the European Construction Products Directive 305/2011/EEC and in accordance to the requirements of the European Standard EN 12591:2009.

The scope of the management system concerns the manufacturing, trading and distribution of fuels, biofuels, lubricants, waxes, bitumens, sulphur and special mineral oil derivatives. The Management System consists of a series of mutually interacting processes as it is depicted in the Interrelation Process Diagram, including the production processes, the critical processes as well as the supporting ones.

INTEGRATED MANAGEMENT SYSTEM: INTERRELATION PROCESS DIAGRAM

The explanation of the Integrated Management System acronym terms in the previous diagram of the Integrated Management System are given below:

CBP	Corporate Business Planning
MSM	Marketing Sales Management
TIM	Tank Inventory Management
ROS	Refinery Operating Scheme
DDM	Delivery & Dispatch Management
ENM	Environmental Management
HSM	Health & Safety Management
PMM	Plant Maintenance Management
CSM	Customer Satisfaction Management
PVM	Procurement Vendors Management
QCM	Quality Control Management
HRM	Human Resources Management
QSM	Quality System Management

Environmental Management is included in the Company's supporting processes. The Environmental Management System aims at accomplishing a continuous environmental improvement

in compliance with the current Greek and European environmental legislation through the continuous effort to minimize the diverse operations' impact on the Environment.

The System structure follows the steps of a dynamic cyclical process, as depicted in the following diagram.

MOTOR OIL's Environmental Management System includes the following levels of documentation:

- A Manual of the Integrated Management System, which constitutes a guide for the implementation, maintenance and improvement of the Environmental Management System.
- Procedures Environmental Management Guidelines, which describe the sequence of actions, the assignment of authorities and the relevant forms.
- Files Forms and Documents.

One of the main points in planning and implementing the Environmental Management System, is the identification of environmental aspects and the evaluation of the environmental impacts.

The identification of the environmental aspects and the relevant impacts, is accomplished by a wide group of company staff and executives, which includes the Heads of Sections, employee representatives the Head of the Health, Safety and Environment Section, the General Manager of Manufacturing, as well as the Deputy General Manager of Manufacturing, in order to ensure a multilateral approach to the identification and control of the environmental aspects.

The identification of the impacts is accomplished through:

- Inspection of the Refinery process units and other premises
- Investigation of the environmental documentation (manuals, procedures, forms and archives)
- The regular / scheduled or unscheduled (as required) internal audits

The investigation of the environmental impacts takes into account the following:

- Current regulatory requirements and their modifications
- The opinion of stakeholders and related parties
- The operation of the Refinery under
 - normal conditions
 - irregular conditions
 - probable emergency conditions

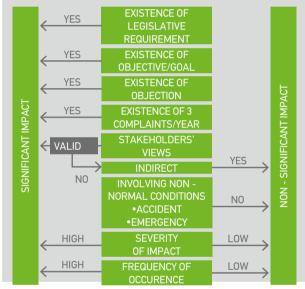

The environmental impacts are assessed according to a series

of criteria; more specifically:

- every legislatively regulated impact is considered important
- every impact related with the environmental policy and/or an already established target / objective of the company is considered important
- every impact for which an objection or a complaint has been raised, or is viewed as significant by relevant stakeholders, is considered important

The assessment method of the environmental impacts is shown on the following diagram, from which the most important environmental impacts are extracted.

CRITERIA FOR EVALUATION OF ENVIRONMENTAL IMPACT

2.2 Health, Safety and Environmental Policy (HSE Policy)

MOTOR OIL operates in a way that fully respects / with full regard for Health, Safety and the Environment. To achieve that, MOTOR OIL is committed to:

- Set objectives and targets in order to accomplish a continuous improvement of the implemented management systems concerning Health, Safety and the Environment.
- Meet or exceed the demands of legal and other requirements
- Manufacture products of guaranteed quality that comply with, or exceed Health and Environment Protection specifications for each product, and with efficient use of raw materials, energy and technology.
- Report both good and bad performance, as a responsible corporate citizen.
- Maintain emergency preparedness and response systems and plans, ensuring that all appropriate drills are regularly performed.
- Integrate Health, Safety and Environmental issues into all

business decisions, plans and operations in the framework of the Integrated Management System.

- Provide consultation, information and training to employees, contractors and others working on its behalf and ensuring their commitment and awareness.
- Conscientiously and strictly implement the environmental operation terms that define the allowed level of produced wastes.
- Cooperate with all stakeholders so as to develop balanced Health, Safety and Environmental Protection programs, which take into account the needs of all those involved.

At MOTOR OIL, whatever we program, plan or do, we perform it safely in an environmentally friendly and a cost-effective manner.

2.3 Environmental Programs, Objectives and Improvements

During the years 2012 - 2016 the company has implemented numerous programs aiming at the minimization of the environmental impacts of its operations, while reducing losses, recovering raw material residues / residues of raw materials and reducing production cost. The programs implemented and their time of completion is shown in the following table:

	2012	2013	2014	2015	2016
AIR					
Improving waste gas emissions monitoring					
 Certification of continuous emissions measuring systems of SO₂, NOx and suspended solids at large combustion plants stacks of fuels, lubricants and MHC units, according to international standards (QAL2) 	•	•			
 Certification of continuous emissions measuring systems of SO₂, NOx and suspended solids at LCP stacks of fuels, lubricants and MHC units, according to international standards (AST). 		•	•	•	
 Estimation of heavy metals and polycyclic hydrocarbons concentration as a fraction of suspended solids PM₁₀ in ambient air. 	•	•	•		
- Improving the alkaline waste treatment, by upgrading the caustic neutralization unit, in order to reduce the load of odorants / smells					•
- Estimation of Ni concentration as a fraction of suspended solids PM ₁₀ in ambient air at the Ag.Theodoroi area		•	•		
 CO₂ emissions reduction (MT/h) by 6% after the furnace F 101 replacement with new one, which has higher energy efficiency 					•
 Installation of analyzers for continuous measurement of SO₂, NOx, Dust, CO and operating conditions (CO₂, H₂O, pressure, temperature and flue gas flow) of gas turbines stacks with a rated thermal input > 100 MW 					•
WATER / WASTE WATER					
Installation of Conductivity meters in inlet and outlet of the desalination plant		•			
New desalination plant installation		•			
Improving the storage / transportation of chemical substances in normal or emergency conditions, by construction of new storage facility, for the optimal environmental management				•	
SOIL					
Investigation of alternative ways of management of the tank bottom sludges, after their treatment in decanter	•				
Soil study of the new tanks T790/T792 installation area in order to certify the soil for land use change					•

2.4 Environmental Aspects and Impacts

The environmental impacts are classified as [follows]:

- Direct or indirect: This depends on whether the company has or has not the responsibility of their direct handling, taking into account the existing legal context, contracts with clients or suppliers, as well as the feasibility for the company to control the impacts.
- Major or minor depending on whether handling these impacts is controlled by the Environmental Management System.

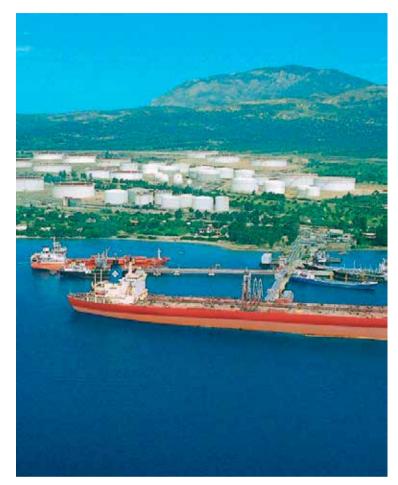

All the environmental impacts related to the operation of the Refinery have been evaluated according to their significance and among them the following are characterized as important:

- Air emissions from point sources and refinery production processes
- Industrial and Sanitary waste water
- Solid waste, hazardous or not
- Energy and water consumption
- Noise

All the above environmental impacts are monitored and recorded on a regular basis, and relevant measures are continuously taken, so that the Company will act appropriately in order to improve its environmental performance. A similar evaluation of impacts is also carried out during the construction of new projects.

At the same time, the Company has evaluated the indirect environmental impacts resulting from the interaction with third parties, products and services over which the Company does not have any administrative control.

The main environmental aspects associated with gas emissions, liquid and solid waste, and the indirect environmental impacts are described in the following sections.

2.4.1 Waste Gas

Air emissions due to the operation of the Refinery units, as well as their sources are shown at the following diagram.

FurnacesBoilers and Burners	 CO₂, NOx, SO₂, Suspended Solids Emissions from stationary combustion sources
 Stripping gas units Sulfur recovery units (Catalytic conversion of H₂S into sulfur and then incineration of fuel gases) 	 SO₂, H₂S H₂S emissions are minimal because of their complete conversion into solid sulfur
 Fuel storage API Oil Separators Loading and unloading of raw materials and products Leakages from the distribution network 	• VOC's emissions Volatile Organic Compounds emissions are coming from fuel storage tanks, API Oil Separators, as well as from leakages that may occur during transportation of fuels within the refinery

The Refinery takes a series of measures and implements programs - applying best available techniques - aiming at reducing waste gas emissions in the atmosphere. These measures include:

- Treatment of sour and liquid gases before their storage, or their use as a self-consumption fuel, aiming at removing hydrogen sulfide.
- Operation of sulfur recovery units aiming to convert the produced hydrogen sulfide into solid sulfur, which is environmentally friendly.
- Operation of electrostatic filter (ESP) at Catalytic Cracker Unit stack in order to reduce the suspended solid emissions
- Gradual replacement of burners by equivalent with low-NOx emissions.
- Maximising natural gas usage
- Reduction and control of hydrocarbon emissions by taking several measures, such as the installation of closed circuits in gas processing operations, the routing of gases from safety valves to flares, secondary seals in floating roof tanks, floating covers in oil separators and a Vapor Recovery Unit (VRU) in the Truck Loading Terminal.
- Performance control of burners and boilers.
- Monitoring of air emissions through continuous and periodic measurements.

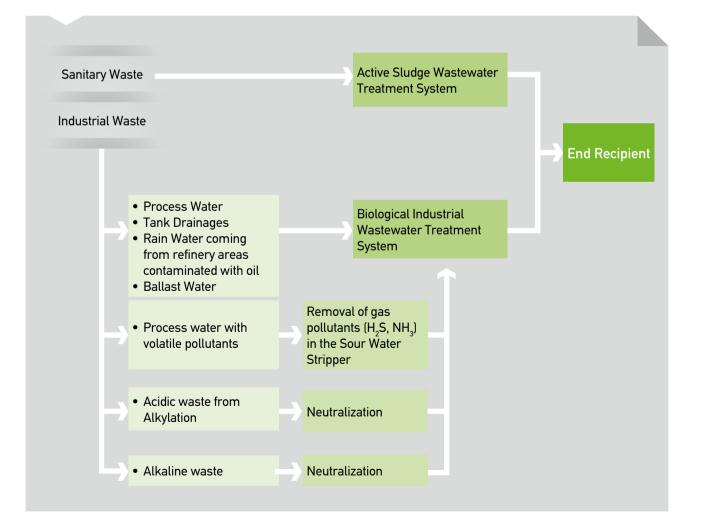

2.4.2 Waste Water

Wastewater produced in the refinery is distinguished in two categories:

- Industrial wastewater
- Sanitary wastewater

Industrial wastewater, which includes process water, tank drainage, ballast water, rainwater coming from refinery areas contaminated with oil is directed either directly, or after some pre-treatment process, to the Industrial Waste Water Treatment plant (secondary treatment), where the pollutant load is reduced, and the water is discharged, according to the environmental provisions and terms.

Sanitary wastewater coming from personnel catering and hygiene areas is treated in an active sludge wastewater treatment system (tertiary treatment). The qualitative characteristics of the treated wastewater are within the defined legislative limits.

2.4.3 Solid Waste

Solid waste generated in the Refinery consists of domestic waste resulting from human activities (consisting of household solid waste such as, paper and metal, food leftovers etc.) and of industrial solid waste (such as scrap materials, spent catalysts, etc.) which is produced during the different stages of the production process.

In order to ensure safe environmental management of solid waste and to prevent or reduce the negative consequences on the environment and the human health and safety risk, the Company implements an environmental integrated plan including the waste

collection, transportation and temporary storage or treatment, until the final management. The final management is performed by licensed companies, depending on the nature of the materials, while the ultimate goal is waste reduction or reuse.

The company submits an annual waste report to the competent authorities of the Ministry of Environment and Energy or appropriately updates the Electronic Waste Register, where all the waste types, which produced during the company activities and the way of management (disposal or recovery), are reported.

In the table below, the main types of solid waste produced by the company facilities are presented.

SOLID WASTE MANAGEMENT		
Type of Waste	EWC Code	Management Method
Alumina	050199	Recovery (Recycling - Reclamation)
Used activated carbon	050199	Recovery (Use as a fuel)
Inactive pellets	050199	Recovery (Recycling - Reclamation)
Waste blasting material, other than those mentioned in 120116	120117	Recovery (Recycling)
Other hydraulic oils	130113*	Recovery (Reprocessing)
Other engine, gear and lubricating oils	130208*	Recovery (Reprocessing)
Paper and cardboard packaging	150101	Recovery (Recycling)
Plastic packaging	150102	Recovery (Recycling)
Wooden packaging	150103	Recovery (Recycling)
Metallic packaging	150104	Recovery (Recycling)
Composite Packaging	150105	Recovery (Recycling)
Mixed Packaging	150105	Recovery (Recycling)
Glass packaging	150107	Recovery (Recycling)
Packaging containing residues of or contaminated by dangerous substances		· · · ·
Absorbents, filter materials (including oil filters not otherwise specified),	150110*	Recovery
wiping cloths, protective clothing contaminated by dangerous substances	150202*	Disposal / Recovery
End-of-life tyres	160103	Recovery (Recycling)
End-of-life vehicles, containing neither liguids nor other hazardous	1 (010 (
components	160106	Recovery (Recycling)
Laboratory chemicals, consisting of or containing hazardous substances, including mixtures of laboratory chemicals	160506*	Disposal
Lead batteries	160601*	Recovery (Recycling)
Ni-Cd batteries	160602*	Recovery (Recycling)
Spent catalysts	160803/160802*	
Spent fluid catalytic cracking catalysts (except 160807)	160804	Recovery (Recycling - Reclamation)
linings and refractories from non-metallurgical processes containing hazardous substances	161105*	Recovery (Recycling)
Linings and refractories from non-metallurgical processes, other than those mentioned in 161105	161106	Recovery / Disposal
Glass, plastic and wood containing or contaminated with dangerous substances	170204*	Recovery
Mixed Metals	170407	Recovery (Recycling)
Metal Wastes, contaminated with dangerous substances	170409*	Recovery (Recycling)
Soil and stones containing dangerous substances	170503*	Bioremediation and disposal / Recovery
Soil and stones other than those mentioned in 17 05 03	170504	Recovery / Disposal
Construction materials containing asbestos	170605*	Disposal
Wastes whose collection and disposal is subject to special requirements in order to prevent infection	180103*	Disposal
Sludges from physico/chemical treatment containing dangerous substances	190205*	Recovery / Disposal
Stabilised wastes other than those mentioned in 190304	190305	Recovery / Disposal
Solid wastes from soil remediation other than those mentioned in 1913 01	191302	Recovery / Disposal
Paper and Cardboard	200101	Recovery (Recycling)
Fluorescent tubes and other mercury-containing waste	200121*	Recovery (Recycling)
Discarded electrical and electronic equipment	200135*	Recovery (Recycling)
Discarded electrical and electronic equipment	200136	Recovery (Recycling)
Plastics	200139	Recovery (Recycling)
Metals	200140	Recovery (Recycling)
Mixed municipal waste	200301	Collection, Recycling and disposal

ENVIRONMENTAL STATEMENT 2016

2.4.4 Indirect Environmental Aspects

The indirect environmental impacts are mainly related to the air pollution caused by vehicles, the H/C gas emissions during loading and unloading of the products into the ships, the noise coming from tank truck traffic and vessel stopover in anchorages, as well as the side impacts in case of an accident during the transport of products to and from the refinery either from suppliers or to customers.

Within the framework of the Integrated Management System, the Company evaluates its environmental performance and trains its suppliers, contractors and subcontractors, on several environmental issues and continuously gives information to its customers regarding the usage and distribution of the products. At the same time, it investigates new, environmentally mild solutions to its transportation needs and attends to the effective organization of its raw material and product transport.

2.4.5 Environmental Incidents

Having set as main priorities the prevention of the undesirable effects of the operation of the units and the minimization of hazards during operations, the Company aims at the elimination of environmental incidents / accidents.

For that purpose the Company has compiled Emergency Plans that are fully compliant with the local and national plans for fighting pollution through which it provides necessary directions for the making the right decision and taking appropriate action. At the same time, the Company trains systematically its personnel in order to ensure that appropriate action is taken in response to any emergency.

The effectiveness of the above activities is attested to by a record of no environmental incidents / accidents during 2016, as well as in previous years.

03 RESULTS OF YEAR 2016

3.1 Environmental Performance of 2016

3.1.1 Waste Gas Management

Aiming at the minimizing of air emissions (point and diffuse), there is fully and constantly monitoring of the air emissions through continuous and periodic measurements within the Refinery and also the air quality in the wider area.

The industrial premises of MOTOR OIL utilize modern equipment for monitoring air quality and point emissions coming from different sources during the production process. The Monitoring network of Air Quality consists of a mobile station (A) that has the capability to measure and record continuously pollutants such as hydrogen sulfide (H₂S), sulfur dioxide (SO₂), suspended solids (PM₁₀), nitrogen oxides (NO, NO₂, NOx), methane (CH₄), non-methane hydrocarbons (NMHC), total hydrocarbons (THC), benzene (C₆H₆), carbon monoxide (CO), as well as, meteorological parameters (wind speed and direction, temperature and relative humidity of air). In addition there are three permanent stations for measuring hydrogen sulfide (H₂S) and sulfur dioxide (SO₂). Two out of three permanent stations are located within the refinery premises (B, C), and the third one at the Agioi Theodoroi Police Department (see map).

Air emissions are controlled by a network of Continuous measuring devices, which are connected to the Refinery Control System (DCS) as well as periodic measurements by an Independent accredited third party.

Continuous measurements are performed to:

- Oxygen in all combustion plants in order to control combustion,
- Sulfur dioxide (SO₂), suspended solids, nitrogen oxides (NOx)

and operational parameters (flow, oxygen, pressure and temperature of fuel gases) at the Large Combustion Plants (stacks with rated thermal input >50MW).

Within the control and the measurements quality assurance program, the emission measuring devices (SO₂, NOx, suspended solids) of the Large Combustion plants are calibrated using parallel measurements in accordance with the EN 14181 Standard.

- Sulfur dioxide (SO₂), suspended solids, nitrogen oxides (NOx), carbon monoxide (CO) and operating parameters (flow, oxygen, pressure, humidity and temperature of fuel gases) at the Catalytic Cracker Unit (FCC).
- Sulfur dioxide (SO₂), oxygen and temperature at the exit of Claus Units.

The emissions monitoring of the stacks with rated thermal input $<\!50$ MW, is carried out every three months.

The results of the above measurements are compared with the pollutants' limit values of air emissions and for air quality, as set in the Approval of the Environmental Terms and in the following laws:

JMD 14122/549/E103/11 (Government Gazette 488B)

RESULTS OF YEAR 2016 03

JMD 22306/1075/E103/07 (Government Gazette 920/08.06.07)

JMD 36060/1155/E103/2013 (Government Gazette 1450/B/14.06.2013)

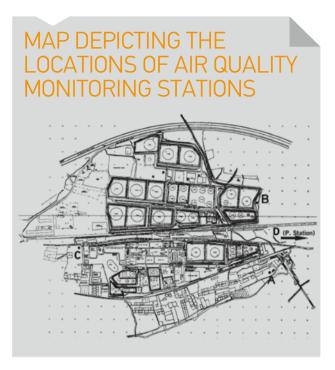

A list of Environmental Legislation items that concern the company is offered in Annex I of this Environmental Statement.

Company compliance with the requirements of the Legislation is audited on both a regular and an ad hoc basis. The regular audits are made via the Internal Audits of the Environmental Management System (relevant procedure QSM-02 «Management Evaluations») at least once a year.

The ad hoc audits are made after a decision of the Manufacturing General Manager, or the Technical Dpt. Manager, or the Integrated Management System Section Head, depending on the factual elements contained in the information that is continuously provided to them.

Air Quality:

 $\rm H_2S,\,SO_{_{2^{1}}}\,\rm NO_{_{2^{1}}}\,\rm NOx,\,PM_{_{10^{1}}}\,\rm CH_{_4^{1}}\,\rm NMHC,\,THC,\,CO,\,Benzene$

The results of the monitoring program for 2016, show that the air quality of the Refinery area continues to be satisfactory.

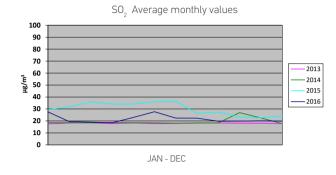

In 2016 there were no exceedances in the statutory limit values due to the operation of the refinery. The excess in the PM₁₀ suspended solids was due to the prevailing meteorological conditions in the region (dust transfer from Africa) and after the phenomenon the values returned to normal levels. The competent authorities were informed about the excess in accordance with the refinery environmental terms.

At the following table and corresponding diagrams, the average hourly, daily and monthly values of pollutants, measured by the mobile station of the Air Quality Monitoring Network for the year 2016, are presented.

Sulfur Dioxide

Nitrogen Oxides

PM₁₀ Suspended Solids

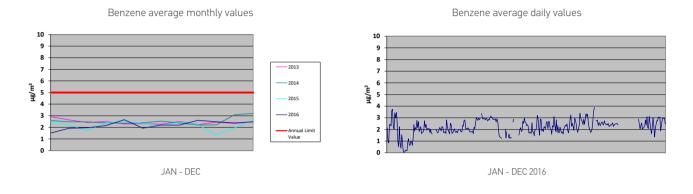

JAN - DEC

It should be noted that the lack of data on suspended solids PM₁₀ for April 2016, is due to temporary damage of the measuring device. The Relevant Authorities were informed, and after the damage was restored, the data recording continued uninterruptedly.

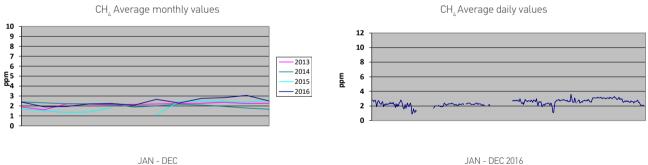

Benzene

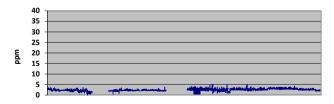

It must be noted that the Refinery is not the only source of air pollutants in the wider area of the installations. Other sources of air pollutants are the road traffic (National road Athens - Corinth), the presence of various Industrial Plants and the railway network.

In the diagrams below the concentrations of methane (CH₂), nonmethane hydrocarbons (NMHC), total hydrocarbons and carbon monoxide are shown.

JAN - DEC 2016

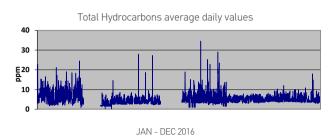

JAN - DEC 2016

The non-recording of values arises from damages or maintenance of the measuring devices. The competent authorities were informed in time, as required, concerning the reported damage / maintenance of the devices and also for the proper restore of the devices operation.

Air Quality: H₂S

The refinery has achieved minimization of hydrogen sulfide emissions by upgrading the sour gas processing units as well as the sulfur recovery units.

H,S concentration is monitored on a daily basis in all of the four stations of the Air Quality Monitoring Network.

mpre man man

Based on the results of the measurement of air quality station in the nearest residential area (Ag. Theodoroi) and the regional stations of refinery (near the port facilities, east of 752 tank and at the parking area of AVIN OIL) is concluded that H₂S concentration in the wider refinery area is remarkably low.

OTOR OIL (HELLAS) CORINTH REFINERIES S.A.

Sulfur dioxide and Nitrogen oxides emissions

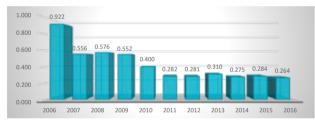

In 2007 the emissions of sulfur dioxide were remarkably reduced compared to previous years, despite the expansion of the process units and increased production. This is mainly due to the decrease of the sulfur content in self-consumption fuel and to the continuously improved emission control technology used by the refinery (sulfur recovery units).

The below diagrams are shown the constantly decreasing Sulfur dioxide emissions and the specific indexes of sulfur dioxide emissions per quantity of raw material and produced products.

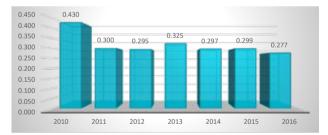

Sulfur Dioxide Emissions (MT/year)

Sulfur Dioxide Emissions / Quantity of raw material (MT/ thousand MT)

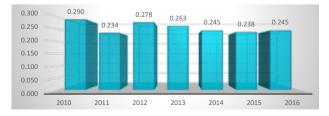

Sulfur Dioxide Emissions / Quantity of produced products (MT / thousand MT)

The emissions of Nitrogen Oxides (NOx) for 2016 are 2,820 MT, are practically stable compared to 2015, and the specific index per thousand MT of produced products for last years are shown at the diagram below.

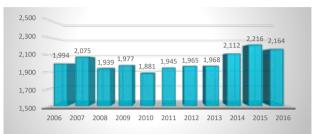

NOx emissions / Quantity of produced products (MT / thousand MT)

Carbon dioxide emissions

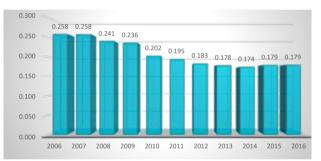

Carbon dioxide emissions (according to the European Directive 2003/87/EC) for 2016 were 2,164,076 tones. The annual emissions of carbon dioxide over the last years are shown at the diagram below.

CO, Emissions (thousand MT)

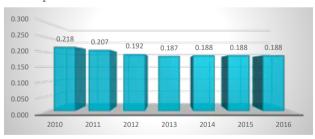

The specific carbon dioxide emissions (MT CO_2 / MT of raw materials) for the period 2006 to 2016 are shown at the following diagram.

CO, emissions / Quantity of raw materials (MT / MT)

The specific carbon dioxide emissions (MT CO_2 / MT of produced products) for the last years are shown at the diagram below.

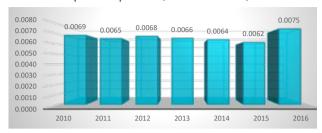

CO, Emissions / Quantity of produced products (MT / MT)

The declining trend of specific carbon dioxide emissions per quantity of raw materials and also per quantity of produced products, was established during the last years, due to implementation of Environmental protection projects and also due to the monitoring and checking of emissions.

It should also be noted that the quantities of greenhouse gas emissions except CO₂ (concerning emissions of CH₄, HCFCs, SF₆, HFCs and N₂O) were increased in relation to previous years, because of the increase in the calculation factors of methane emissions (CH₄). For 2016 was 86.32 MT and the specific index per quantity of produced products are shown at the table below.

Other Greenhouse gases (except CO₂) / Quantity of produced products (MT / thousand MT)

In particular, the emissions of greenhouse gases other than $\rm CO_2$ during the last years, are shown in the table below

	2013	2014	2015	2016
CH ₄	45.03	47.26	48.32	66.94
HFCs	0.00	0.00	0.00	0.00
N20	24.30	24.95	24.29	19.37
SF,	0.00	0.00	0.00	0.00
HCFCs	0.00	0.00	0.00	0.00
Total (M.T)	69.33	72.21	72.60	86.32

Emissions of Volatile Organic Compounds (VOCs)

Με στόχο τη μείωση και τον έλεγχο των εκπομπών πτητικών οργανικών With the target of reduction and control of Volatile Organic Compounds, the Company has implemented amongst other a series of programs that include the reduction of diffused emissions coming from different sources (oil separators, unit equipment) and the installation of secondary seals in the floating roof tanks.

Diffused emissions of Volatile Organic Compounds, is a chemical and oil industry characteristic that is not only a source of pollution but also a cause of forgone profits and loss of products for the industry. Thus, the goal of reducing such emissions is dual. The anti-pollutant measures taken in order to reduce the emissions coming from oil product storage and distribution units, include equipment upgrades (tanks, pumps, etc), as well as regular inspections and maintenance of all units, which is very crucial in emissions control. In order to reduce the emissions arising from the loading of tank trucks, a vapour recovery unit has been installed, in conformity with current legislation, which is the most effective and globally accepted measure for minimizing such emissions.

Specifically, in order to check the equipment, the Leak Detection And Repair (LDAR) program is applied, by which the leakages are detected and recorded during regular inspections done by the operators of the various sections. The inspections are carried out by use of portable devices, and the leakages are fixed the soonest possible.

The number of inspections for the year 2016 is 15,634. The following diagram shows the annual number of inspections for the last years.

The inspections, which carried out in 2016, under the leak detection program (Leak Detection And Repair, LDAR) and their distribution per refinery unit are shown in the following table.

	FUELS	FCC	LUBES	OFFSITES	JETTY	мнс	TRUCK LOADING	MONTHLY TOTAL

3.1.2 Waste Water Treatment

Industrial wastewater produced by the Refinery's production units is routed, into the industrial wastewater treatment plant, where it is subjected to a sequence of treatment steps that are depicted on the diagram that follows (API Oil Separators, Dissolved Air Floatation (DAF) units, sand filters, biofilters, sludge treatment). At the same time, sanitary wastewater is treated in the sanitary wastewater treatment plant.

The goal of industrial and sanitary wastewater treatment systems is the full treatment of wastewater so that the treated effluent is in compliance with the requirements of current legislation. Wastewater effluents are measured on a daily basis, whereas, a number of programs are implemented aiming at efficiently dealing with the effects of malfunctioning of the treatment units, the automation of their functioning and the optimization of their performance. The quality characteristics of the effluents are shown in the table that follows, where the measured values are much lower than the limit values defined by the legislation.

The results of the measurements are in conformance with the corresponding threshold limits of the parameters, as they are set in the Prefecture Decision 17823 / 79 (Gazette No.1132 / B / 79), which

has been modified by the Prefecture Decision A3 / 6533 /81 (Gazette No. 477 / B / 81), in accordance with the provisions of Prefecture Decision 7859/02 (Gazette 1212 / B / 02).

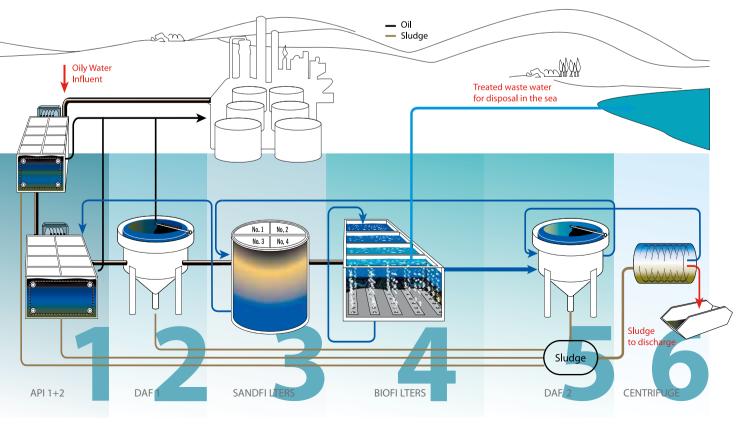

Concentration of polluting parameters at the outlet of the industrial wastewater treatment plant.

As far as the results of Industrial Waste of the Waste Water Treatment Plant, are shown below:

S/N	Parameter	Average 2016 values	Threshold Limits
1	рН	7.1	6-9
2	Temperature (°C)	30.2	35
3	Oil Content (mg/l)	1.6	10
4	BOD ₅ (mg/l)	24.6	40
5	COD (mg/l)	106	150
6	NH ₃ (mg/l)	13.5	15
7	Phenols (mg/l)	0.26	0.50
8	Sulfides (mg/l)	1.1	2
9	Suspended solids (mg/l)	19.6	40

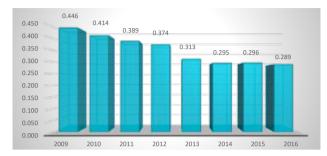

Hydraulic and polluting load of the industrial wastewater treatment plant is as follows:

#	Parameter	Average 2011 values	Average 2012 values	Average 2013 values	Average 2014 values	Average 2015 values	Average 2016 values	Terminology BOD: Biochemical
1	Discharge (m³/day)	10,663	10,983	9,485	9,817	10,070	9,592	Oxygen Demand
2	BOD ₅ (kg/day)	256	260	232	241	239	236	COD: Chemical
3	Suspended solids (kg/day)	190	189	159	174	192	188	Oxygen Demand
4	Phenols (kg/day)	3.01	3.03	2.15	2.72	2.54	2.48	

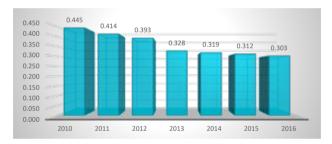

In the following diagram, is shown the specific volume of treated wastewater (m³/ MT of raw materials) for the last years.

Treated Wastewater Disposal / Quantity of raw materials (m³/ MT)

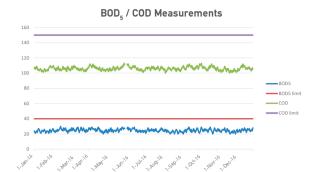

Furthermore, the specific volume of treated waste water per quantity of produced products for the last years, is as follows:

Treated Wastewater Disposal / Quantity of produced products (m³/ MT)

In the following diagram the variation, during 2016, of the ${\rm BOD}_{\rm 5}$ and COD values in the output of industrial wastewater treatment plant is presented.

Sanitary Wastewater Treatment Plant Outlet

At the following table the results of BTEX in the output of industrial wastewater treatment plant for the year 2016, according to the instructions of Ministry of Environment and Energy, are presented:

JMD 4859/726/01 (FEK 253B)	Monthly threshold limits	Daily threshold limits	Sample at the outlet of Waste Water Treatment Plan	Sample at the outlet of Waste Water Treatment Plan
Sampling			May 2016	August 2016

Solid Waste Management

Solid waste produced during the refinery's operation is collected and processed according to the relevant legislation (indicatively): Law 2939/01 (Gazette No. 179/A) – Packaging and alternative management of packaging and other products, Ministerial Decree 50910/2727/03 (Gazette No. 1909/B) – Measures and terms for the managing of solid waste, Ministerial Decree 13588/725/06 (Gazette No. 383/B) – Measures and terms for managing hazardous waste), by the following methods:

- Recycling (outside the refinery premises)
- Recovery (outside the refinery premises)
- Processing inside the refinery premises
- Re-usage
- Final disposal (outside the refinery premises)

The Refinery is aiming at the increase of recycling and re-usage of the produced waste. The amount of solid waste that was disposed and managed outside the refinery premises, over the last years, is shown in the following table.

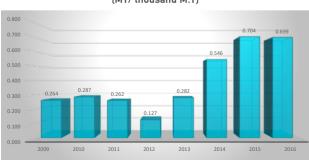

Solid waste Management (MT / year)

RESULTS OF YEAR 2016 03

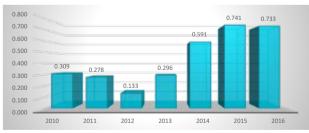

The specific quantity of solid waste per quantity of raw materials for the last years is as follows:

Quantity of Solid Waste / Quantity of raw materials (MT/ thousand M.T)

The specific quantity of solid waste in relation to the production (MT / thousand MT of produced products), is shown below:

Quantity of Solid Waste / Quantity of Produced Products (M.T / thousand M.T)

The increase in quantity of solid waste which was recycled arises from the extended maintenance and the recyclable materials which were led to recycling, during the last two years. It shall be noted that from the total quantity of 8,438.43 MT of solid waste, the quantity of 8,273.6 MT constitutes non-hazardous waste and it was all led to recycling. The quantity of 164.83 MT of solid waste is characterized as hazardous waste. The specific index of hazardous waste per quantity of produced products for 2016 is 0.0143 MT / thousand MT of produced products.

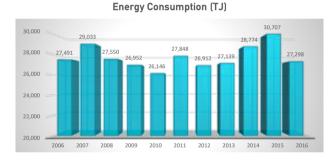

3.1.4 Energy Consumption

30

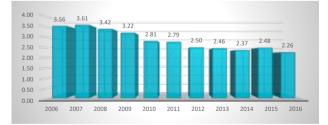

The energy consumption of the refinery includes the fuel used in combustion processes and the electric power for the operation of mechanical equipment, which is almost exclusively produced by the Power and Steam co-Generation Plant. The refinery fuel mixture includes fuel oil, fuel gas, liquefied gas and natural gas.

The projects that were completed in the previous years, (mainly the introduction of natural gas in the refinery fuel mixture in 2008, the replacement or extensive maintenance of gas turbines, the upgrade of the preheating furnaces, the increase of the recovery level of condensates, the installation of an Advanced Control System, the use of hot streams to preheat cold streams, the maximization of refinery gas usage etc), combined with the systematic monitoring of energy efficiency and the preventive maintenance schedules, contributed to the significant reduction of the refinery energy consumption over the last years, confirming the optimal energy management. Thus, the energy consumption by the refinery's processes in 2016 is 27,298 TJ from 30,707 TJ in 2015. This reduction is due to the projects aimed at improving energy management and to the small decrease in output in 2016 compared to 2015.

Furthermore, the improvement of the energy performance, is shown by the ratio of Energy / thousand MT of raw materials.

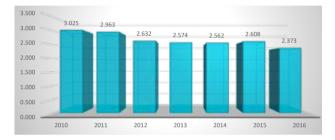

Energy Consumption / Raw Materials (TJ / thousand MT)

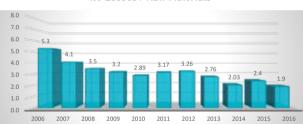

It must be noted that the usage of raw material volume (instead of end product volume) as a comparison basis is justified since this measure is commonly and internationally acceptable as benchmark for the assessment of the impact on the environment from crude refining premises (bref: IPPC reference document on best available techniques for mineral oil and gas refineries) and at the same time allows the correct interpretation and timeliness evaluation of the environmental efficiency of the refinery.

The specific index of Energy / thousand MT of produced products is shown below:

Energy Consumption / Quantity of Produced Products (TJ / thousand MT)

The total losses have significantly declined in recent years compared to the years before 2006, as shown in the diagram below.

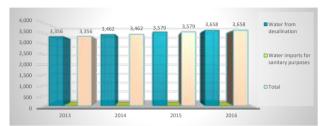

%o Losses / Raw Materials

3.1.5 Water Consumption

Water used for the Refinery's various operations is obtained by sea water desalination, while the raw water carried by tank trucks and vessels has been eliminated.

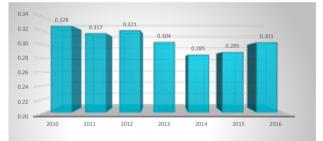

The quantity of water consumed during the last years, are shown at below diagram.

Annual Water Consumption (thousand m³)

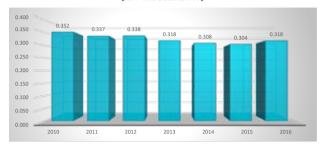

The specific index of water consumption per quantity of raw materials for the last years is shown at the diagram below and is an indicator of efficient use of materials.

Annual water consumption / Quantity of Raw Materials (m³ / thousand MT)

The specific index of water consumption per unit of produced products (m^3 / thousand M.T), is shown at the following diagram

Annual water consumption / Quantity of produced products (m³/ thousand MT)

It should be emphasized that the water being used in the manufacturing process comes exclusively from the processing of sea water, and consequently, there is no negative impact on the natural resources of the area whatsoever.

It is also pointed out that, in the context of the company's social contribution, amounts of water covering the water supply needs of nearly two hundred neighboring residences are granted free of charge.

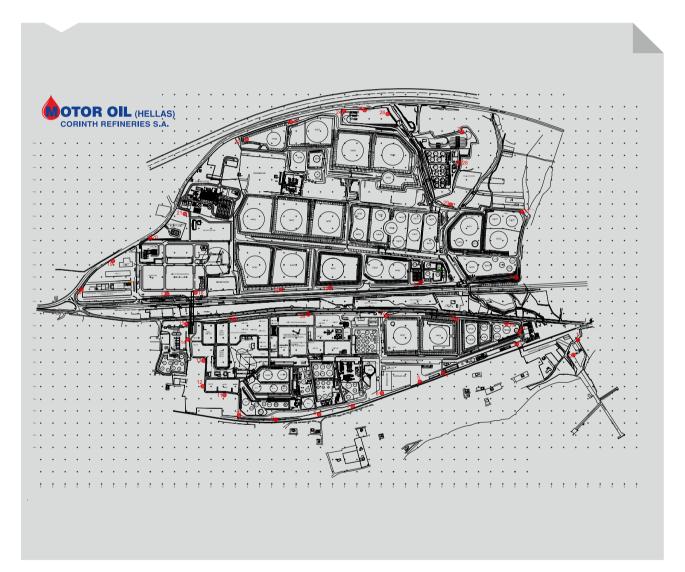

ENVIRONMENTAL STATEMENT 2016

3.1.6 Noise

Having set as a goal the reduction of environmental noise levels within and up to the boundaries of the Refinery premises, the Company has taken all the necessary measures, which include the installation of silencers, as well as the purchasing of low noise level equipment. In order to achieve reduction in the noise levels, sound curtains have been installed at the aeration units of the wastewater treatment plant.

The noise levels are monitored on a regular basis by conducting measurements at a large number of locations around the Refinery. The positions where measurements are recorded are shown on the following Map.

Indicative measurements for 2016 are presented in the following table:

Locations	Average Measurements January 2016 (dBA)	Average Measurements July 2016 (dBA)	Average Measurements October 2016 (dBA)	Threshold Limits (dBA)
Perimeter of the refinery-	54.5	54.0	55.2	65.0
South perimeter (points 1 to 15)	52.7	52.4	52.3	55.0

04 OBJECTIVES

4.1 New objectives and programs

MOTOR OIL constantly implements new programs and actions aiming at improving its environmental performance, while setting new objectives for the future. The objectives and programs that are planned for the following years are presented in the following table.

ω 0 201 201 **OBJECTIVES AND PROGRAMS** AIR CO, emissions reduction / MT of feed by 20% after the revamping of the furnaces of the vacuum distillation unit U200 SOIL / EARTH Reduction of the quantity of solid waste stored in the Refinery and implementation of new alternative management methods: - Finding at least one additional way of managing / handling and exploiting of solid waste (catalysts, resins, bleaching earth) by use in the cement industry (through a licensed disposal company) - Finding at least one additional way of managing / handling of sludge from the tanks bottom and the waste treatment plant after treatment in a decanter Construction of new bed at the contaminated soil treatment plant by the method of bioremediation, aiming in increase the unit capacity by 5%

ENVIRONMENTAL STATEMENT 2016

REGISTRATION INFORMATION / NEXT ENVIRONMENTAL STATEMENT

The company is registered in the European System of Ecological Management and Audit Scheme EMAS. Moreover the company is registered in the Greek Ledger of EMAS Organizations with registration number EL000067.

The present Environmental Statement concerns the year 2016. The next Environmental Statement will be edited, verified and issued in June 2018.

Mr. Spyros J. Sofos, Integrated Management System Section Head is responsible for issuing the Environmental Statements.
